Introduction

We created in Sinequa a white list in the File Mappings section.

A File mappings is a csv file that can be used during indexation to fill additional meta-properties (source fields in the index).

We also use some mapping files during the users imports to store information used during search for filtering.

Files EHSADMIN

Use to restrict access to the specific search interfaces for administrators.

The search interface xECM_FP_PRODUCTION_ALL_SINEQUA_ADMIN (<https://ehs-all-search.syensqo.com>) is used only by IT admin and EHS admin to see Released and Historical docs.

Sample for EHSADMIN

EHSADMIN;vincent.desthieux@syensqo.com
EHSADMIN;aline.martinet@syensqo.com
EHSADMIN;luc.ruault@syensqo.com
EHSADMIN;nicolas.thomas@syensqo.com
EHSADMIN;christopher.riley@syensqo.com
EHSADMIN;justin.bender@syensqo.com
EHSADMIN;paul.paetzke@syensqo.com
EHSADMIN;laetitia.jezequel@syensqo.com
EHSADMIN;anacristina.ribeiro@syensqo.com
EHSADMIN;barbara.souza@syensqo.com
EHSADMIN;joyalsingh.johnsonjayasingh@syensqo.com
EHSADMIN;panagiotis.melekos-ext@syensqo.com
EHSADMIN;martina.gatti@syensqo.com
EHSADMIN;valeria.carvalho@syensqo.com
EHSADMIN;shivaleela.bolligorla1-ext@syensqo.com
EHSADMIN;atmanand.melagiri1-ext@syensqo.com
EHSADMIN;sujay.s-ext@syensqo.com

Filling

The file is used during the users import job from the Active Directory.

administration

Partition > Security > Domains > LDAP > **OXO**
1 reference

General Mappings Users and Groups Advanced Status

Mappings

Name	Value
param1	distinguishedname
param2	mail
param3	department
param4	departmentNumber
param5	company
param6	title
param7	FileMapping2("EHSADMIN",mail)

Use

For the profile xECM_FP_PRODUCTION_ALL_SINEQUA_ADMIN (<https://ehs-all-search.syensqo.com/>) in the search.cs plugin we added this code:

```
if ( Str.Contains(Session.Profile.Name, "_ALL") ) {  
    if ( Session.User.Param7 == "EHSADMIN" ) {  
        // is AHSADMIN  
    }  
    else {  
        sql = Str.Replace(sql, "where", "where 98=99 and ");  
    }  
  
    Sys.Log("CAMEROUN _ALL : sql " + sql);  
}
```

If param7 is equal to EHSADMIN the user can see all the documents in the search interface xECM_FP_PRODUCTION_ALL_SINEQUA_ADMIN

This query change in the code doesn't change the restrictions put in the profile.

Change effect

The users import LDAP job must be run if you change the content of the white list. It is scheduled everyday or can be triggered manually:

administration

Partition > Security > Domains > LDAP > **OXO**
1 reference

General | Mappings | Users and Groups | Advanced | Status

Name	/LDAP/oxo/
Description	
Connector type	Active Directory
