General presentation

Objective of the application

Teh objective of the application is to provide provide a **cost visibility solution ,** improving the **transparency** and including:

- External spend (excl. raw materials & energy) and all Labor

- Providing both an Origin and Destination view

Build a "ZBB-like" foundation (zero based budgeting)

Supported via a user-friendly and flexible toolto help on decision-making

The application is based on 3 tools

- BW : for mreging different source of data , enriching the model with Business rules , providing Destination view of the costs
- Qliksense : for the dashboard
- ANAPLAN : to build teh budget

COSTA model provide 2 views of the costs

- the Origin View
- the Destination view

ORIGIN VIEW

DESTINATION VIEW

Tool Leader : Gilles Madjarian + IT leader of the application:

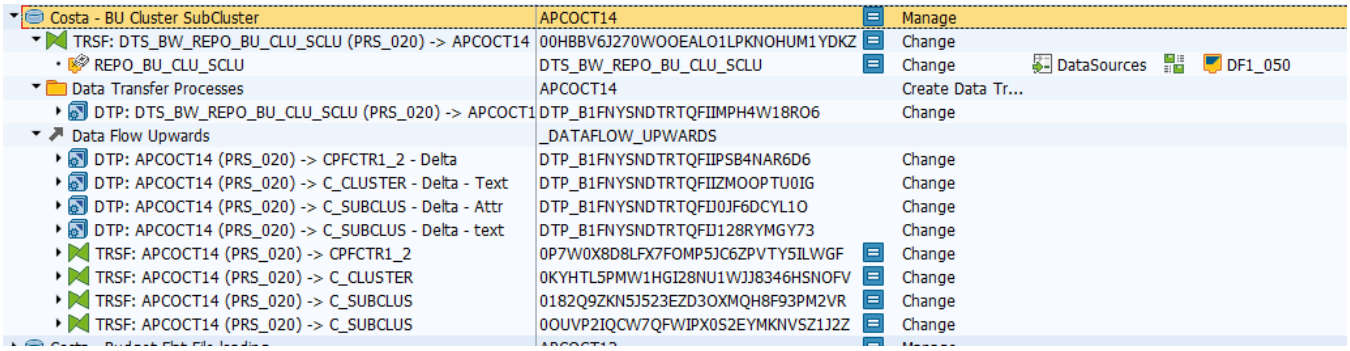
Rules & Explanations

Cluster GBU



Clusters and sub clusters come from PF1_050, datasource DTS_BW_REPO_BU_CLU_SCLU. This datasource uses module function ZFM_BW_REPO_BU_CLU_SCLU).

We extract data into adso APCOCT14 and then load the attributes and textes in master data CPFCTR1_2, C_CLUSTER & C_SUBCLUS (loadings done in process chain PC_CT_MD_01).

Group of function

Goal:

Add in master data C_COSTCTR two attributes: group function and GBU function extracted from hierarchy Z013ZCBS_GRP (WP1 system). The link between cost center and hierarchy is C_FUNCT_2 (attribute from cost center and level 4 in hierarchy Z013ZCBS_GRP).

Steps:

1) Extract Z013ZCBS_GRP hierarchy in master data C_FUNCT_2 where: (done in process chain PC_CT_MD_01).

- C_FUNCT_2 = level 4 in Z013ZCBS_GRP (without controlling area).
- C_FUNCT_2__C_GRPFUNC = Level 3 in Z013ZCBS_GRP.
- C_FUNCT_2__C_GBUFUNC = Level 2 in Z013ZCBS_GRP.

2) Load attributes C_GRPFUNC & C_GBUFUNC in master data C_COSTCTR (with look up on C_FUNCT_2)

Cost package derivation from:

Material Group

In adso APCOCT04 we use data from master data C_MAT_GRP to determine cost sub package (C_CTSBPKG).

This loading is done in process chain PC_CT_TR_01.

Segment

In adso APCOCT05 we use data from master data C_SEGT to determine cost sub package (C_CTSBPKG).

This loading is done in process chain PC_CT_TR_01.

Cost Element:

In adso APCOCT06 we use data from adso APCOCT16 (only landscape ERPSOLV and ERPRCS) to determine cost sub package (C_CTSBPKG) associated to cost element.

This loading is done in process chain PC_CT_TR_01.

Investment Reason for PM Order

Goal: in master data c_coorder add three new attributes C_GEN_REA & C_INV_REA & C_ORD_TYP

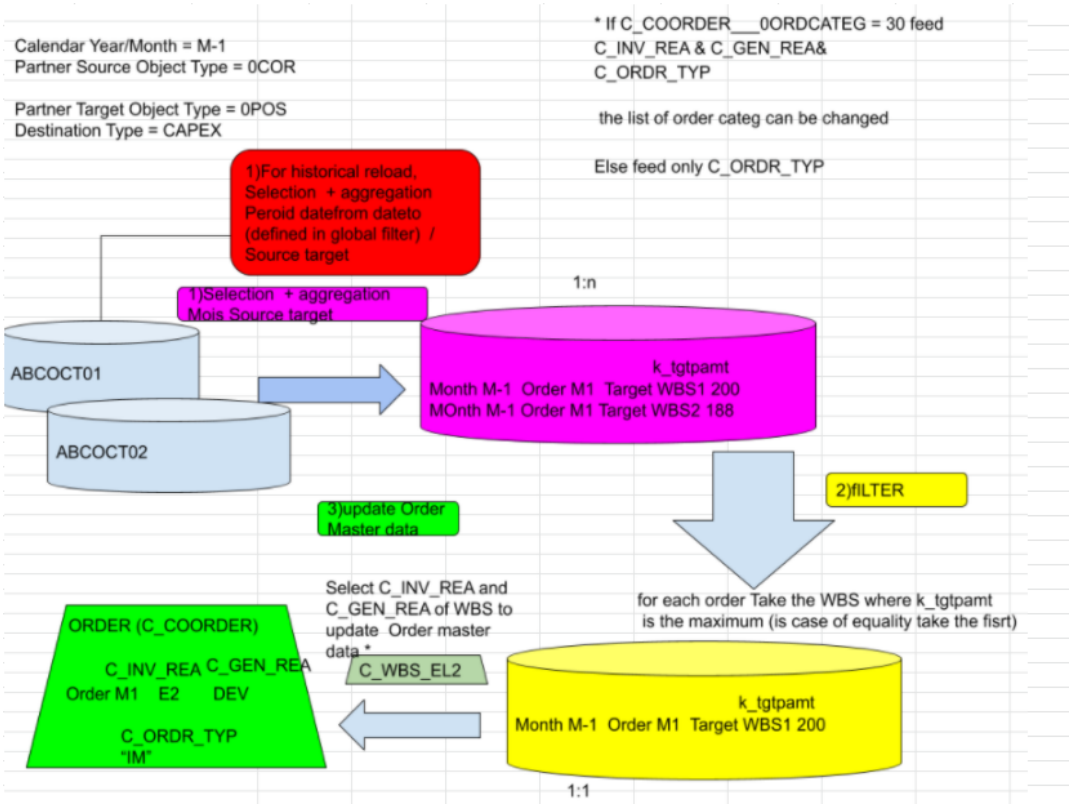
C_GEN_REA & C_INV_REA come from C_WBS_EL2 and C_WBS_EL2 comes from dso ABCOCT01 & ABCOCT02.

Main rules:

- Developments are done in transformtions:
  - Transf: 0COORDER_ATTR -> C_COORDER
  - Transf: 0COORDER_ATTR -> C_COORDER Solvay
- The filters used are defined in master data global filter we stream "C_COORDER".
- By default the period to read adso ABCOCT01 is current month -1. But it's possible to make the look-up with several month with definition of period in master data global filter:

Data Browser: Table /BIC/PC_GLBFILT Select Entries 6

/BIC/C_STREAM	/BIC/C_RULE	/BIC/C_GLBFILT	OBJVERS	CHANGED	/BIC/C_DESC	/BIC/C_SIGN	/BIC/C_OPTION	/BIC/C_LOW	/BIC/C_HIGH	/BIC
C_COORDER	C_ORD_TYP	001	A		C_ORD_TYP value to fill attribute in C_COORDER	I	EQ	IM		Y
C_COORDER	DESTTY	001	A		DESTTY filter to read ABCOCT01 & 2 in routine c_coorder	I	EQ	CAPEX		Y
C_COORDER	ORDERCATEG	001	A		ORDERCATEG to fill gen_rea & inv_rea in routine c_coorder	I	EQ	30		Y
C_COORDER	PERIOD_ORD	001	A		CALMONTH period to read ABCOCT01 & 2 in routine c_coorder	I	BT	201501	201503	N
C_COORDER	PSOBJTY	001	A		PSOBJTY filter to read ABCOCT01 & 2 in routine c_coorder	I	EQ	0COR		Y
C_COORDER	PTOBJTY	001	A		PTOBJTY filter to read ABCOCT01 & 2 in routine c_coorder	I	EQ	0POS		Y



Start routine:

1. Define all filters.
2. Do a select in internal table to take data from adso ABCOCT01 or ABCOCT02 with filters on CALMONTH, C_PSOBJTY, C_DESTTY and C_PTOBJTY.
3. Aggregation with keys LOGSYS /BIC/C_PSOBJ /BIC/C_PTOBJ BIC/C_WBS_EL2 of data from DSO ABCOCT0* in internal table sorted by ascending.
4. Search the attributes C_INV_REA & C_GEN_REA in master data C_WBS_EL2 for all entries of internal table.
5. Create new table to have PSOBJ (coorder) and WBS_EL2 + Attributes in same table.
6. Select current GEN_REA, INV_REA, ORD_TYP from master data C_COORDER to be able to keep current data if nothing was found in dso ABCOCT01 or C_WBS_EL2

End routine:

If C_COORDER___0ORDCATEG = 30 feed C_INV_REA & C_GEN_REA & C_ORDR_TYP

Else feed only C_ORDR_TYP

If nothing was found, no change, keep the current attributes in master data C_COORDER.

Investment Reason for WBS

Goal is to determine "General reason for investment"(C_GEN_REA) from mapping table APCOCT17 for CO-OM WBS part flow and Corr Flow.

A program has been created ZBW_COSTA_INV for upload file as link:

- https://drive.google.com/file/d/1gNADLWzmxbcLj8Da0y2I1H29QirzUwxl/view

aDSO:

- APCOCT17

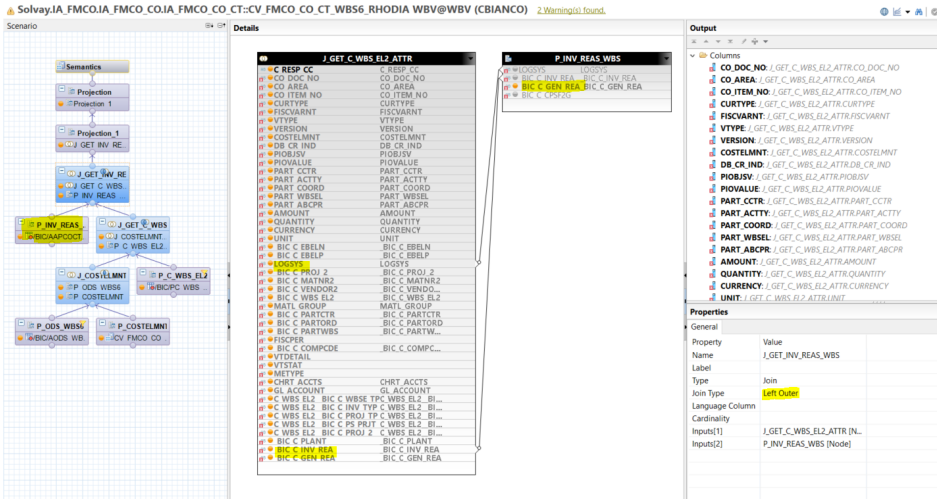
Process Chain:

- PC_CT_INV_REA_01

Impacted HANA Views:

- CV_FMCO_CO_CT_AT_DEST_CORR
- CV_FMCO_CO_CT_CORR_FLOW
- CV_FMCO_CO_CT_WBS6_RHODIA
- CV_FMCO_CO_CT_WBS6_SOLVAY

Example for HANA Views CV_FMCO_CO_CT_WBS6_RHODIA, left join has been made with 0LOGSYS and C_INV_REA and get C_GEN_REA:

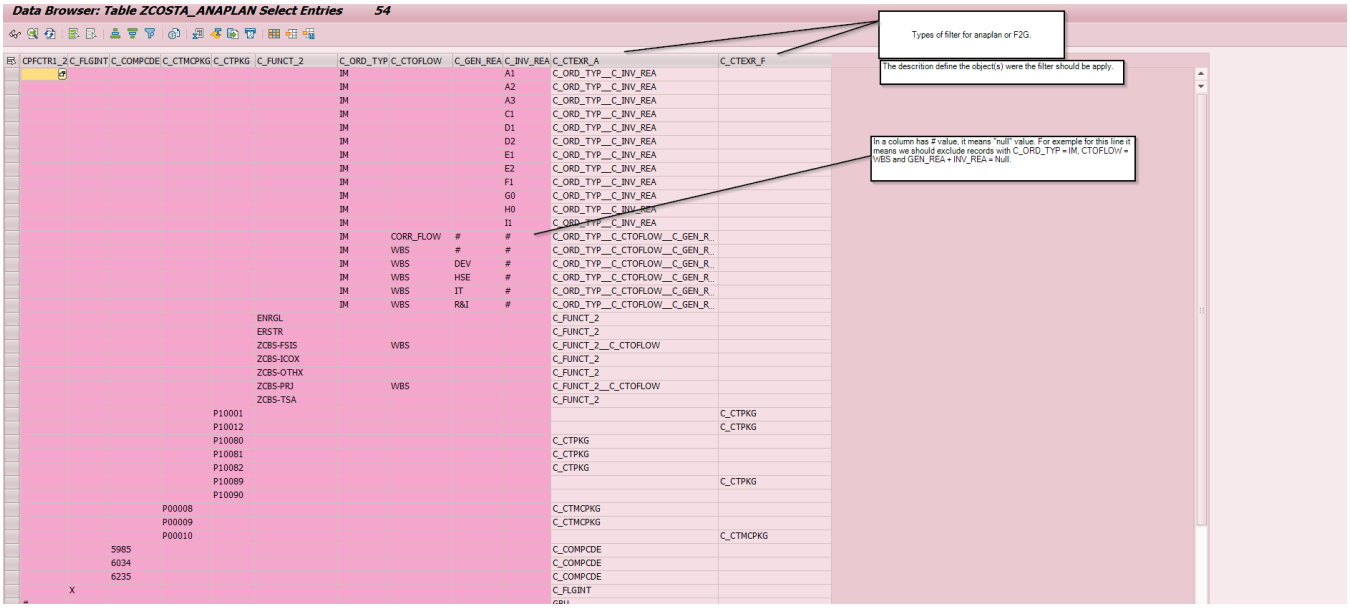


ANAPLAN/F2G SCOPE

In scope of Costa data, it's necessary to define which data are for COSTA, F2G or ANAPLAN. The idea is to exclude some records not in scope of ANAPLAN or F2G.

https://drive.google.com/file/d/1hNM9ZWVDHCp4yIVWyOTv46dIfytFWwqF/view

To do that, it's necessary to define the rule of exclusion in a table: **ZCOSTA_ANAPLAN**



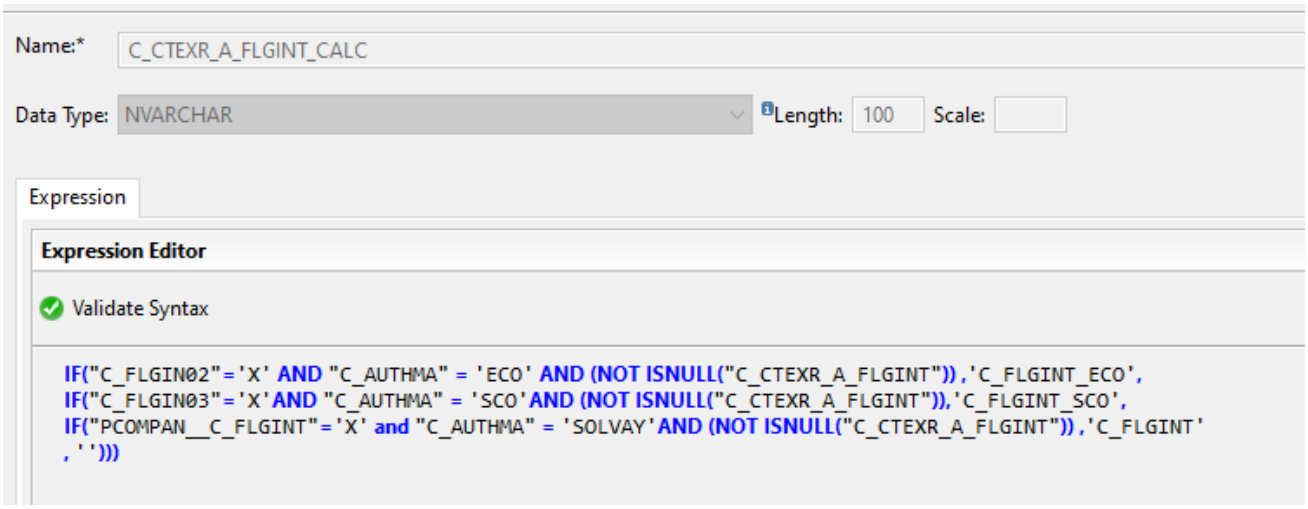
This table could be maintened with SM30 or transaction ZMAINT_COSTA_ANAPLAN.

09/07/2023 : PO2 Project impact : **ZCOSTA_ANAPLAN** has been enhanced but adding an New Key : Authorization Scope. Now the flag determination is dependent on the scope (SCO or ECO) . For D1 (06/2023) all businness rules has been duplicated are are similar for SOLVAY. ECO or SCO. But in the future , the rules can be independant .

Special case : interco flag

- For SOLVAY we check the SOLVAY INTERCO FLAG (C_FLGINT)
- For ECO we check the ECO INTERCO FLAG (C_FLGIN02)
- For SCO we check the SCO INTERCO FLAG(C_FLGIN03)

In "J_FLAG_1_R2" in CV_FMCO_CO_CT_UNION_COSTS_TRANSPARENCY_DEST we added this calculated column to determine which exclusion reason used:



If in source of data of the CV the attribute C_FLGIN02 from C_PCOMPAN is equal to X and C_AUTHMA is ECO and the Exclusion reason is not null (it means the join between ZCOSTA_ANAPLAN table and source of data in CV with C_FLGINT and C_AUTHMA is working), the C_CTEXR_A_FLGINT_CALC = C_FLGINT_ECO.

Else, if the C_CPCOMPAN__C_FLGIN03 (from source of data in CV) = X and C_AUTHMA is SCO and the Exclusion reason is not null the C_CTEXR_A_FLGINT_CALC = C_FLGINT_SCO.

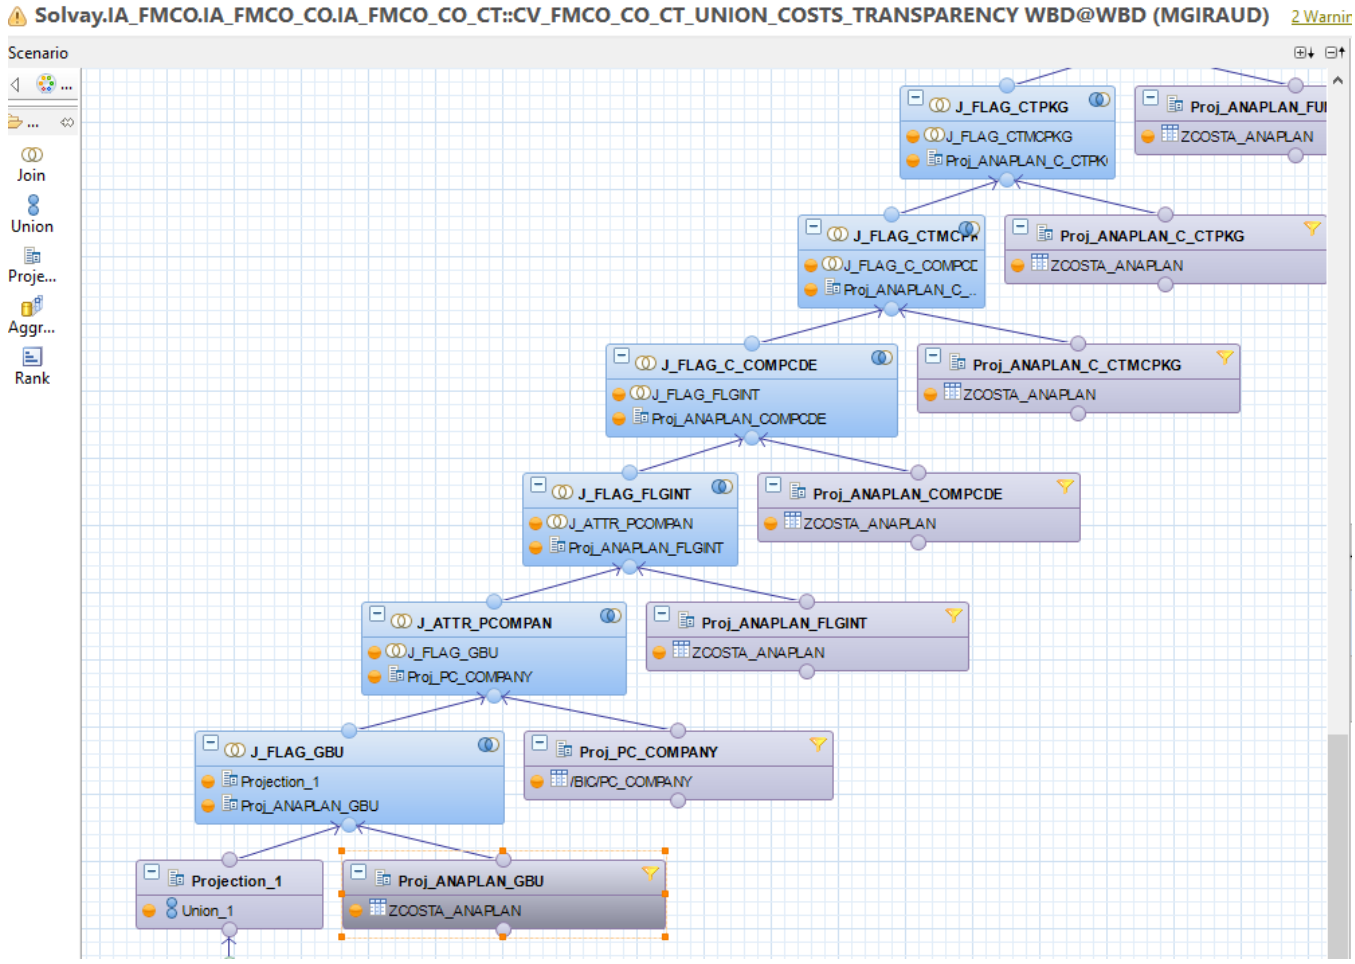
Else, if the C_CPCOMPAN__C_FLGINT (from source of data in CV) = X and C_AUTHMA is SOLVAY and the Exclusion reason is not null the C_CTEXR_A_FLGINT_CALC = C_FLGINT.

Else C_CTEXR_A_FLGINT_CALC is null.

We use this table in calculation view CV_FMCO_CO_CT_UNION_COSTS_TRANSPARENCY_DEST.

To apply the exclusion flag anaplan or F2G:

- We do a projection of table ZCOSTA_ANAPLAN, filtered on one type of C_CTEXR_A or C_CTEXR_F.
- Create a full outer join with costa data and ZCOSTA_ANAPLAN on the necessary field(s) to find which records match with the filter, if there is a match we add a new column with the C_CTEXR_A or F.
- Repeat the join for each type of filter.



- At the end we can define a global column for exclusion flag and exclusion reason (anaplan and F2G).

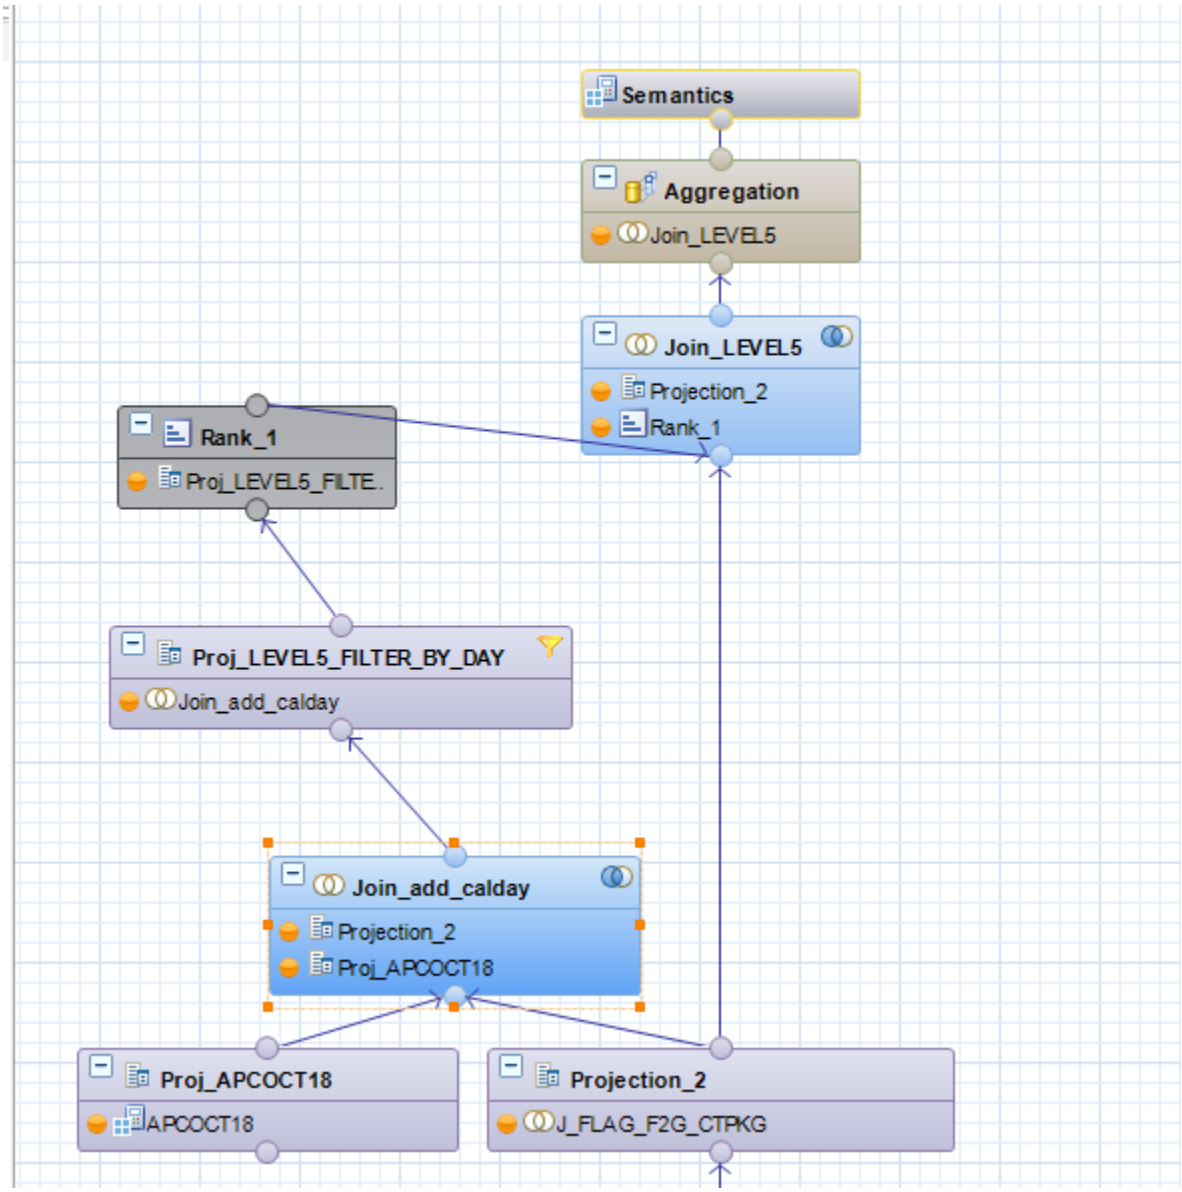
Level 5 - Responsible Cost center

Level 5 responsible cost center is retreived in CV_FMCO_CO_CT_UNION_COSTS_TRANSPARENCY & CV_FMCO_CO_CT_UNION_COSTS_TRANSPARENCY_DEST.



1 - Projection of adso APCOCT18 where L5 are stored.

2 - Join with costa (co_area, c_resp_cc) to have calday (calculated with the first day of the costa period) from costa data in same line of L5.

3 - Projection of L5 with filter on L5 date from and L5 date to with help of calday.

4 - Rank to take only one L5 by co_area, c_resp_cc and date.

5 - Join to add the L5 in costa table with join on CO_AREA, C_RESP_CC and CALDAY.

GBU Global

In calculations views

CV_FMCO_CO_CT_COOM_DEST_RHODIA
CV_FMCO_CO_CT_COOM_DEST_SOLVAY
CV_FMCO_CO_CT_COMPOSITE_RHODIA
CV_FMCO_CO_CT_COMPOSITE_SOLVAY

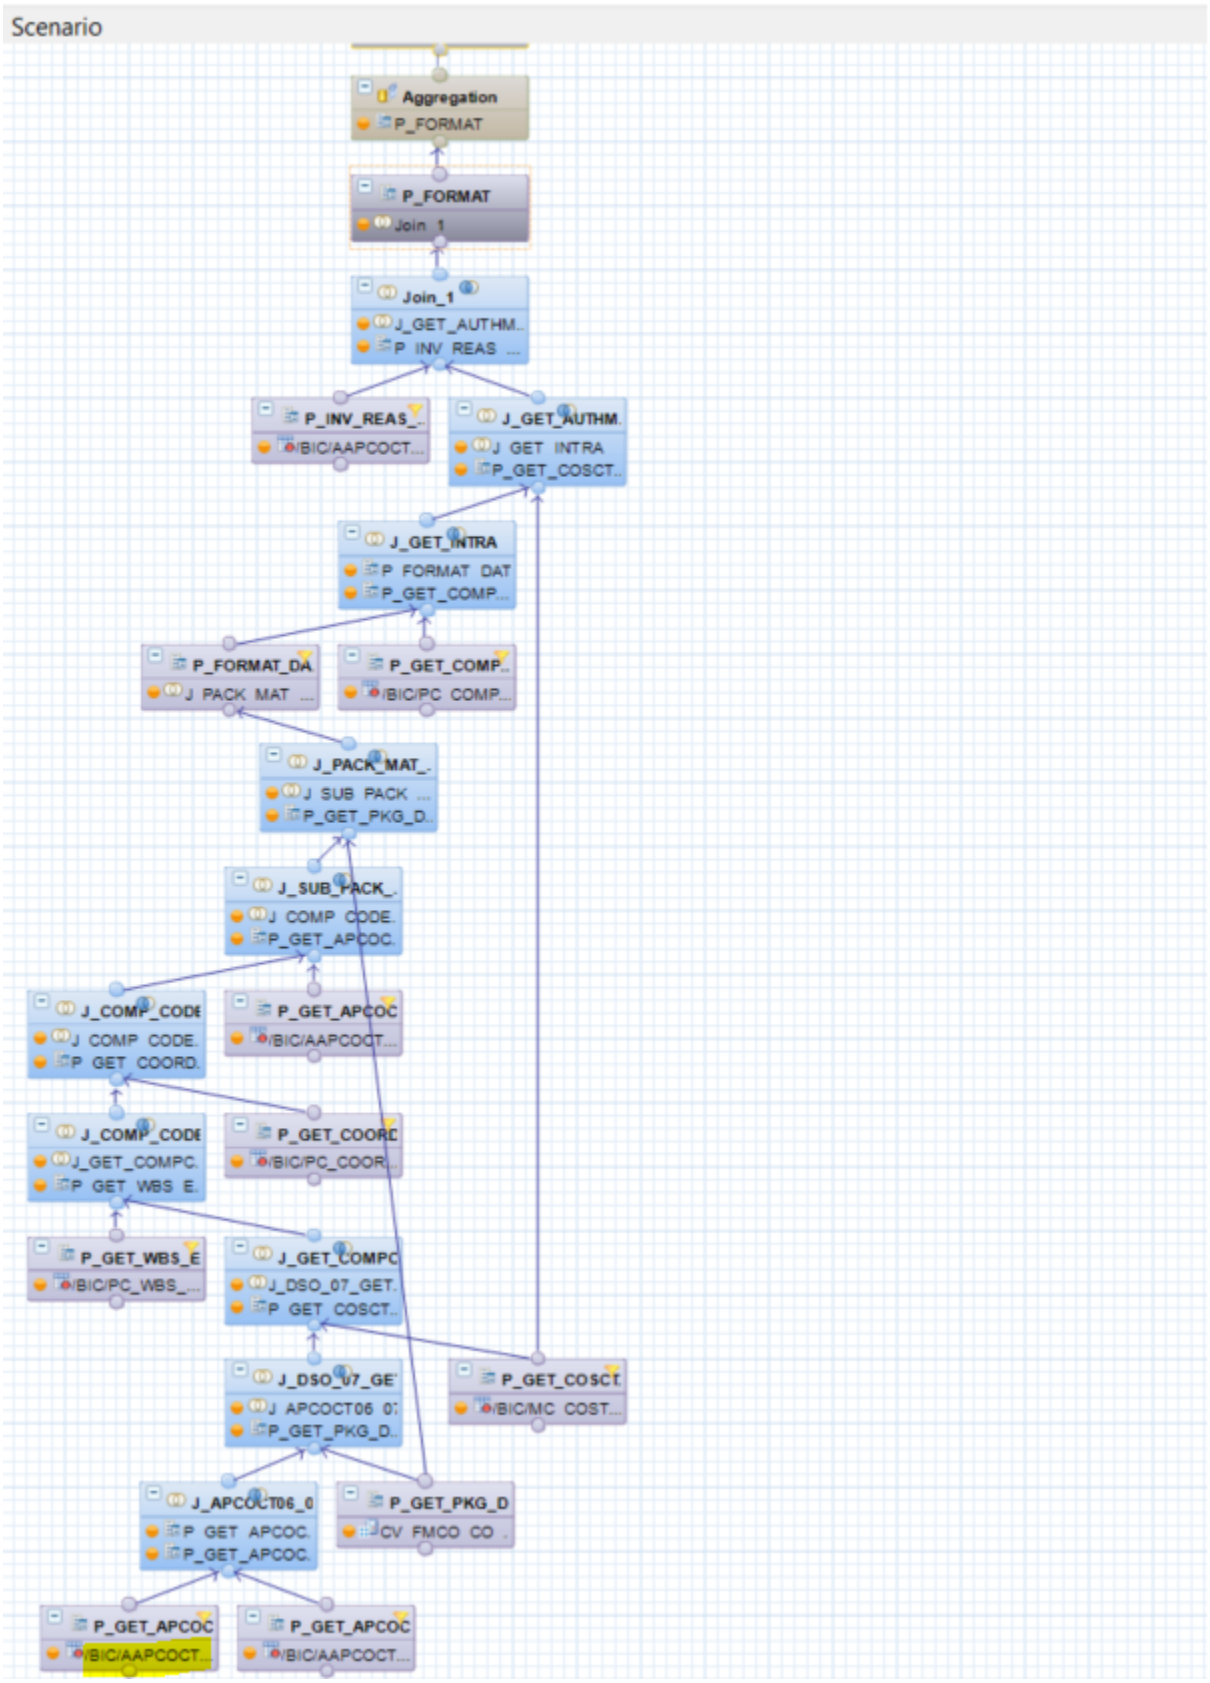
Solvay.IA_FMCO.IA_FMCO_CO.IA_FMCO_CO_CT::CV_FMCO_CO_CT_CORR_FLOW

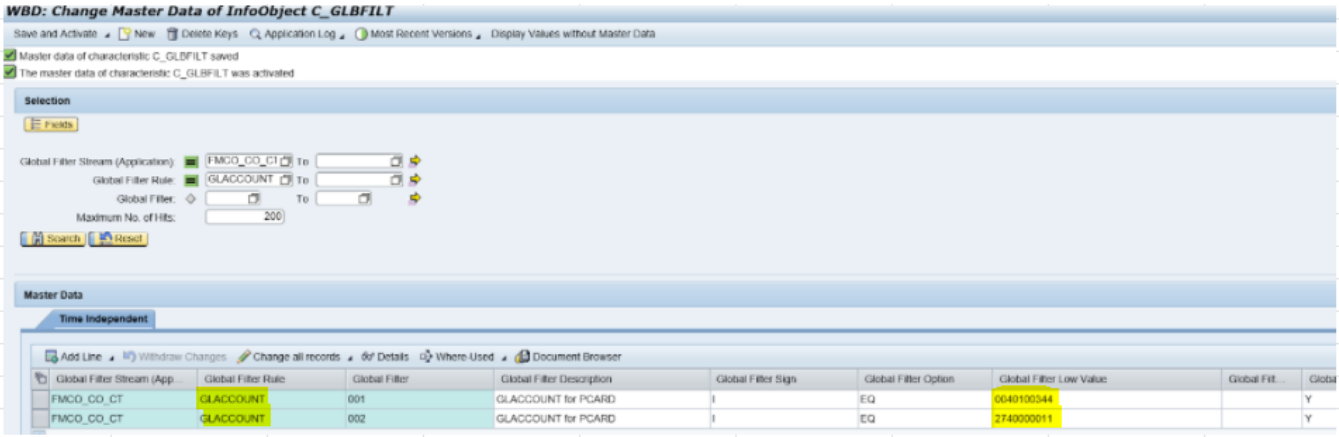


this calculation view is used in composite provider CPCOCT01.

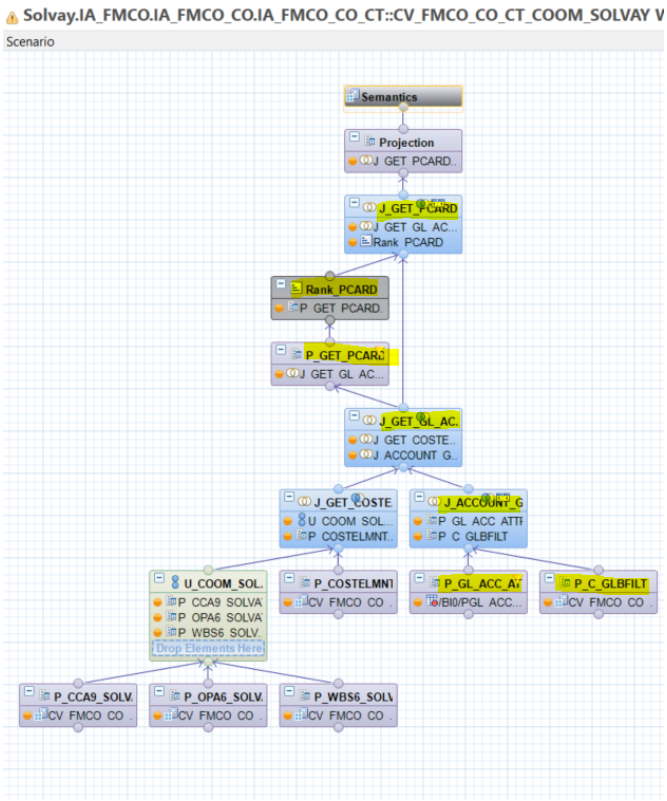
PCARD flow

Goal identify with a flag all CO document (at header level) link to PCARD Flow(COOM flow Solvay and Rhodia).

PCARD GL Account is put in table C_GLBFILT for determine relative CO document GL Account for PCARD, GL Account can be changed :



There are 2 HANA views, CV_FMCO_CO_CT_COOM_SOLVAY and CV_FMCO_CO_CT_COOM_RHODIA for determine PCARD flag:



Networks substitution by WBS

Goal Before Origin/Destination Process replace the partner Object for 0NWA posting by WBS object.

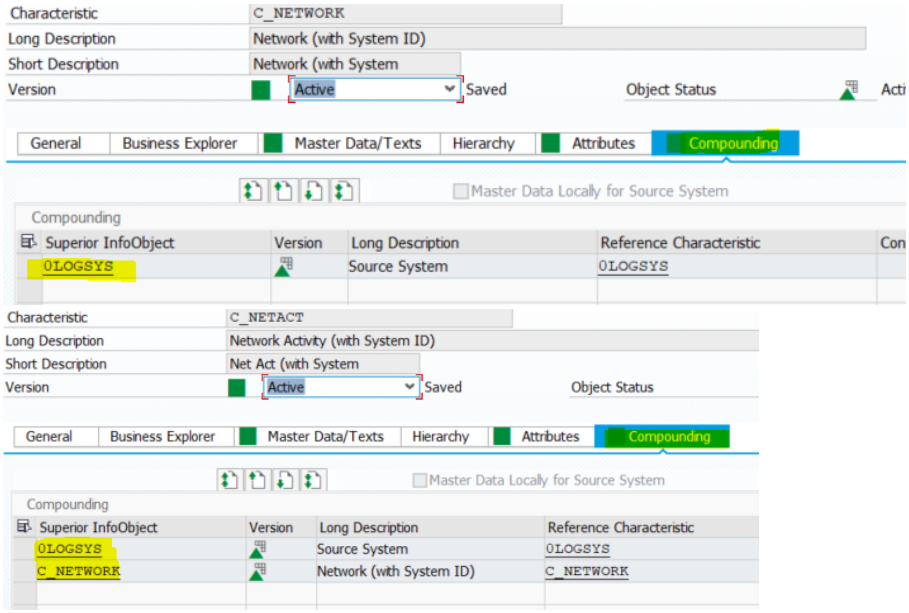
Only for PF1 Solvay

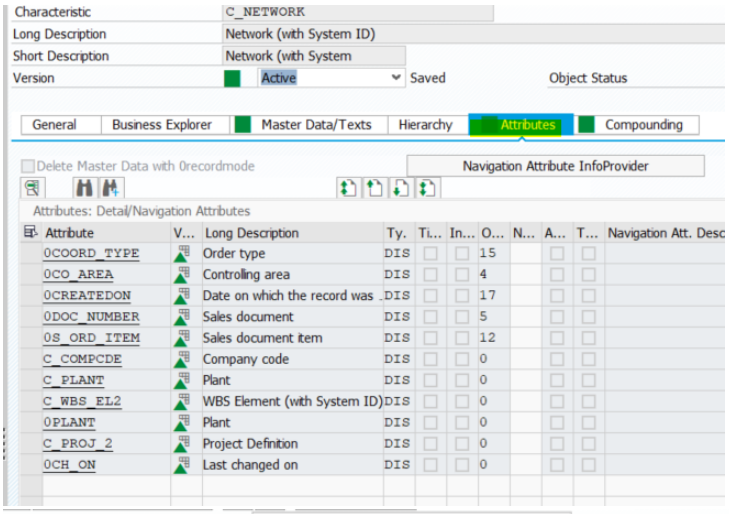
For do this datasource have been used:

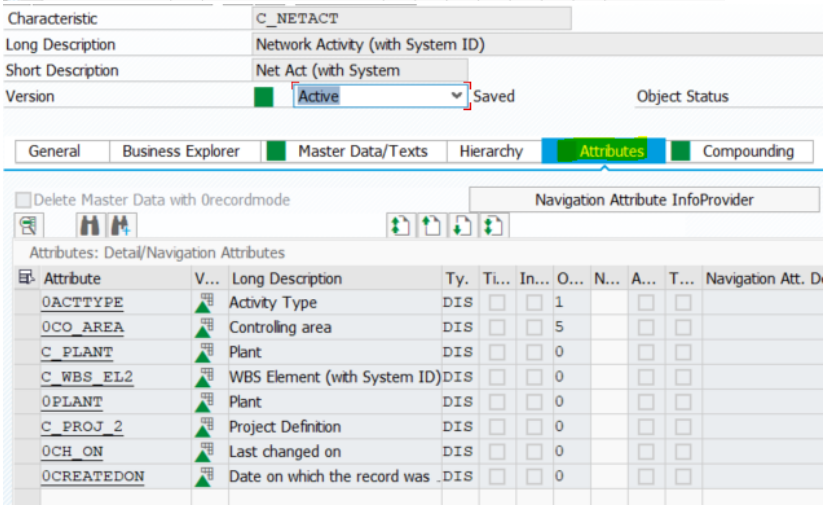
- 0ACTIVITY_ATTR
- 0NETWORK_ATTR

2 master data have been created:

- C_NETACT compounding 0LOGSYS & C_NETWORK
- C_NETWORK compounding 0LOGSYS

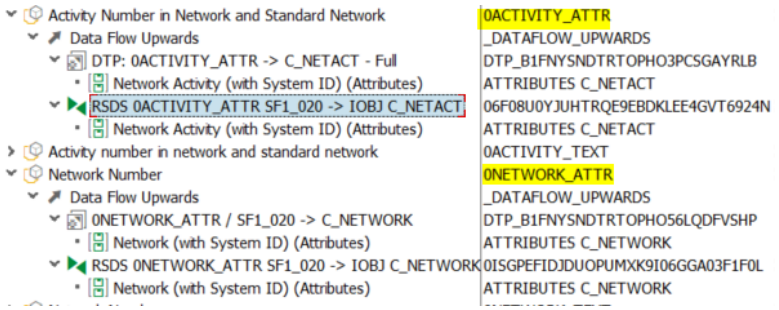






DTP's have been created on ODP.

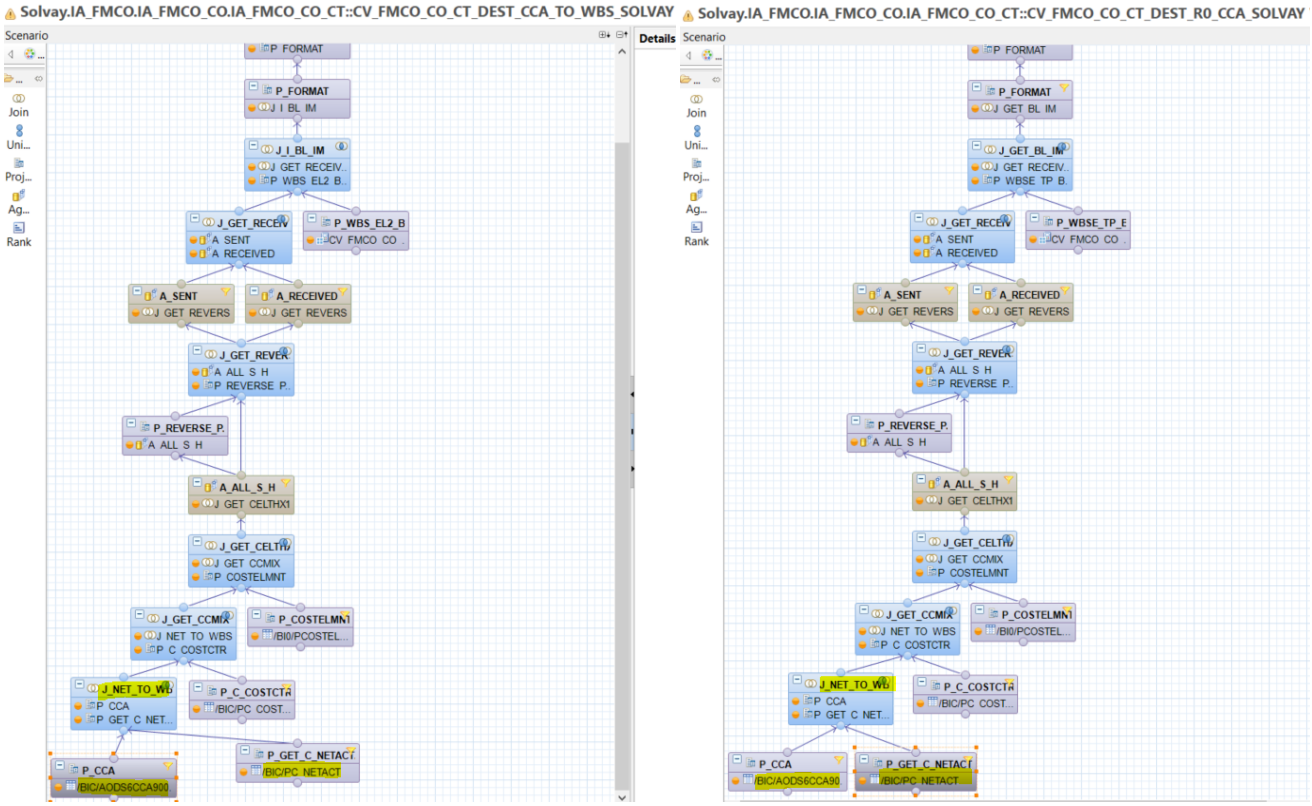
Transformation's are on direct mapping without trasnformation rules.



Loading has been made in process chain PC_CT_MD_01 (daily loading)

Impacted HANA views:

- CV_FMCO_CO_CT_DEST_R0_CCA_SOLVAY
- CV_FMCO_CO_CT_DEST_CCA_TO_WBS_SOLVAY

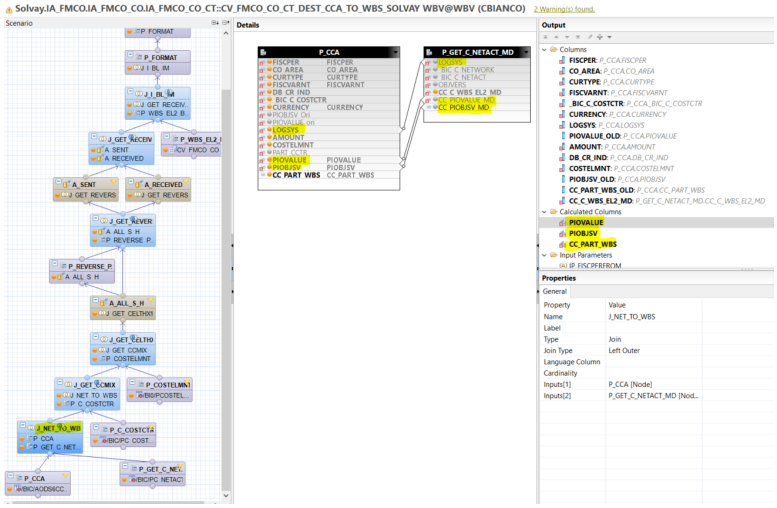


Left join has been made between source table ODS6CCA9 and master data(MD) C_NETACT join on:

- (SOURCE) LOGSYS = (MD) LOGSYS
- (SOURCE) PIOVALUE = (MD) CC_PIOVALUE_MD
- (SOURCE) PIOBJSV = (MD) CC_PIOBJSV_MD

PIOVALUE network value

PIOBJSV type of partner (here 0NWA)



Substitution have been made (0NWA "Network" 0POS "WBS") if in source (ODS6CCA9) PIOBJSV = "0NWA" and DB_CR_IND =" H"

Calculated columns for J_NET_TO_WBS node of view:

View Calculated Column

Calculated columns are used to derive some meaningful information in the form of columns, from existing columns.

Name:* PIOVALUE

Data Type: NVARCHAR Length: 28 Scale:

Expression

Expression Editor

Validate Syntax Language: Column Engine

```
IF(("CC_C_WBS_EL2_MD" != '' and "PIOBJSV_OLD" = '0NWA' and "DB_CR_IND" =
'H'),"CC_C_WBS_EL2_MD","PIOVALUE_OLD")
```

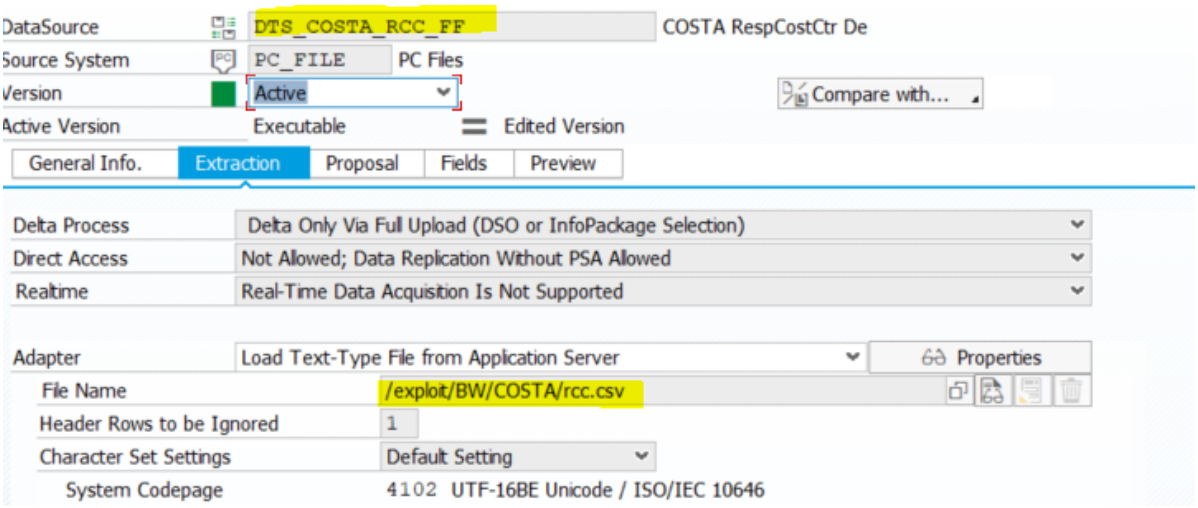
Default Responsible Cost Center

Goal is to determine Responsible Cost Center with complex condition for CO-PA and FI flow.

This complex condition has been translated into technico-functional algorithm:

ALGO	Mécanisme de priorité	
0	GBU/Cost Package/Controlling Aera/Company/BFC activity1	PLANT VIDE DANS LA TABLE EXCEPTION
1	GBU/Cost Package/Controlling Aera/Company	PLANT VIDE DANS LA TABLE EXCEPTION
2	GBU/Cost Macro Package/Controlling Aera/Plant	COMPANY VIDE DANS LA TABLE EXCEPTION
3	GBU/Controlling Aera/Plant	COMPANY /ALL PACKAGE VIDES DANS LA TABLE EXCEPTION
4	GBU/Macro Cost Package/Controlling Aera/Company	PLANT VIDE DANS LA TABLE EXCEPTION
5	GBU/Controlling Aera/Company	PLANT /ALL PACKAGE VIDES DANS LA TABLE EXCEPTION
6	"**GBU**&NC_RCC"	

Datasource with AL11 file link:



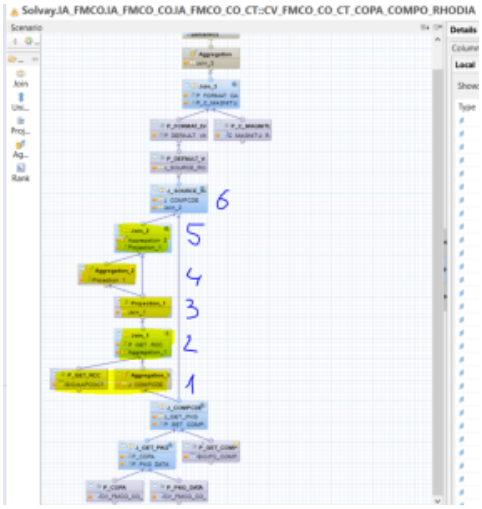
File has been created and downloaded with program **ZBW_COSTA_RCC** (template https://drive.google.com/file/d/1lGDkT4e7LFBnwnFci_27u3maKelt4o0r/view) and AL11 file data it's loaded in aDSO **APCOCT15** with process chain **PC_CT_RCC_01.**

Impacted HANA Views:

- CV_FMCO_CO_CT_COPA_COMPO_RHODIA
- CV_FMCO_CO_CT_COPA_COMPO_SOLVAY
- CV_FMCO_CO_CT_FI_COMPO_RHODIA
- CV_FMCO_CO_CT_FI_COMPO_SOLVAY

Example with HANA View CV_FMCO_CO_CT_COPA_COMPO_RHODIA (same development for others HANA Views)

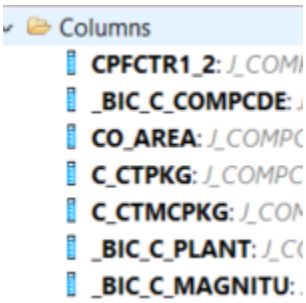
:



For determine "Responsible Cost Center" there are 6 steps:

Step 1:

- Get aDSO(APCOCT15) with uploaded data with program **ZBW_COSTA_RCC**
- Aggregation node with source data only with fields of aDSO:



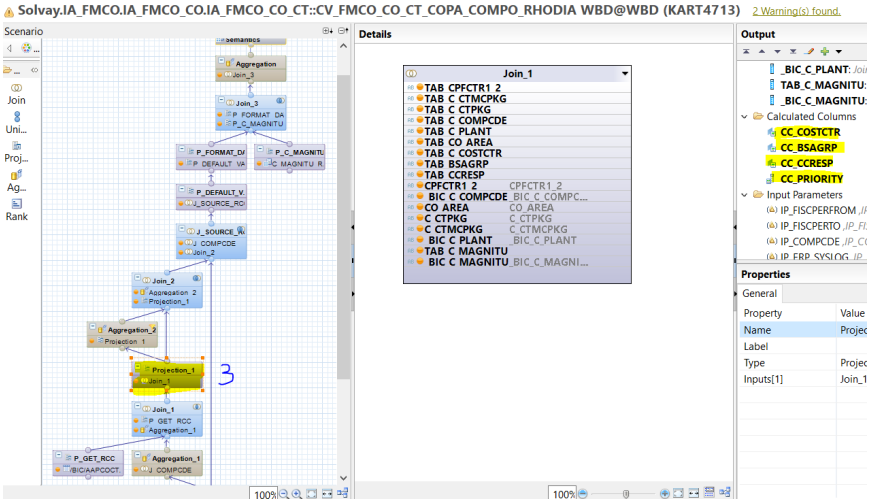
Step 2:

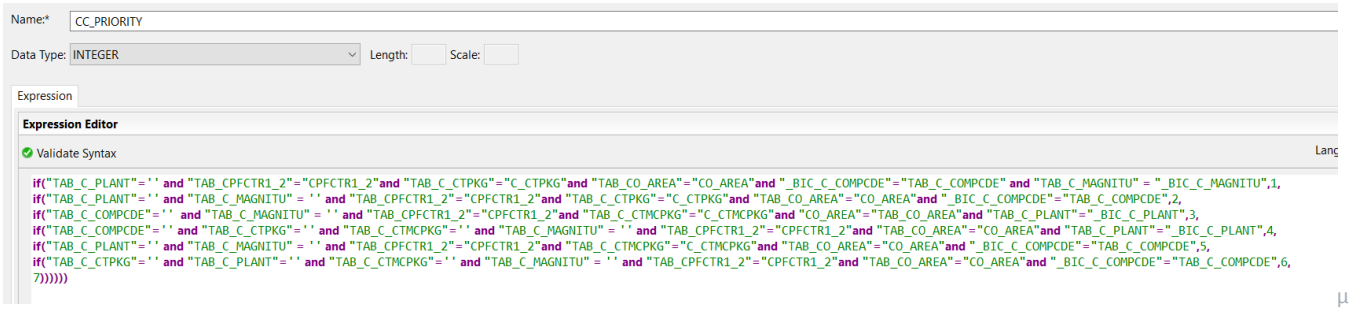
- inner join with 2 nodes on CO_AREA and CPFCTR1_2 (GBU) because GBU and CO_AREA are always in condition.

0	GBU/Cost Package/Controlling Aera/Company/BFC activity1
1	GBU/Cost Package/Controlling Aera/Company
2	GBU/Cost Macro Package/Controlling Aera/Plant
3	GBU/Controlling Aera/Plant
4	GBU/Macro Cost Package/Controlling Aera/Company
5	GBU/Controlling Aera/Company
6	"GBU&NC_RCC"

Step 3:

- Responsible Cost Center determination with complex condition with priority indicator creation 1 to 7





Step 4:

- Aggregation node for get min of PRIORITY field (if i have 1 and 4 indicator for same keys i priorize indicator 1 not 4)
- without cost center and attributs fields

Before aggregation:

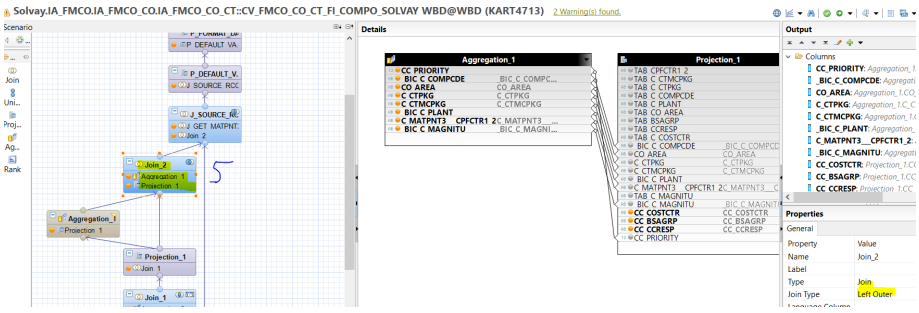
Step 5:

- Get coster and attributs fileds with left join



Step 6:

- left join with source data and step 5 node and get all others source data

Granularity it's the same between source node and semantics nodes

Result:

GBU Billing

Goal is to get user fields in table PRPS in ERP side:

- ZZ_LANDCSAPE : Partner CO Object Landscape (can be different of syslog)
- ZZ_CO_ACC_ASGN_TYPE : Acc Asgn Type (type for WBS = 'PR', ORDER = 'OR', COST = 'KS')
- ZZ_CO_ACC_ASGN : WBS, ORDER, COST

Data source are PF1 and WP1:

- ZZ_PRPS_USER_FIELDS : all fields of PRPS have been retrieved.

BW side:

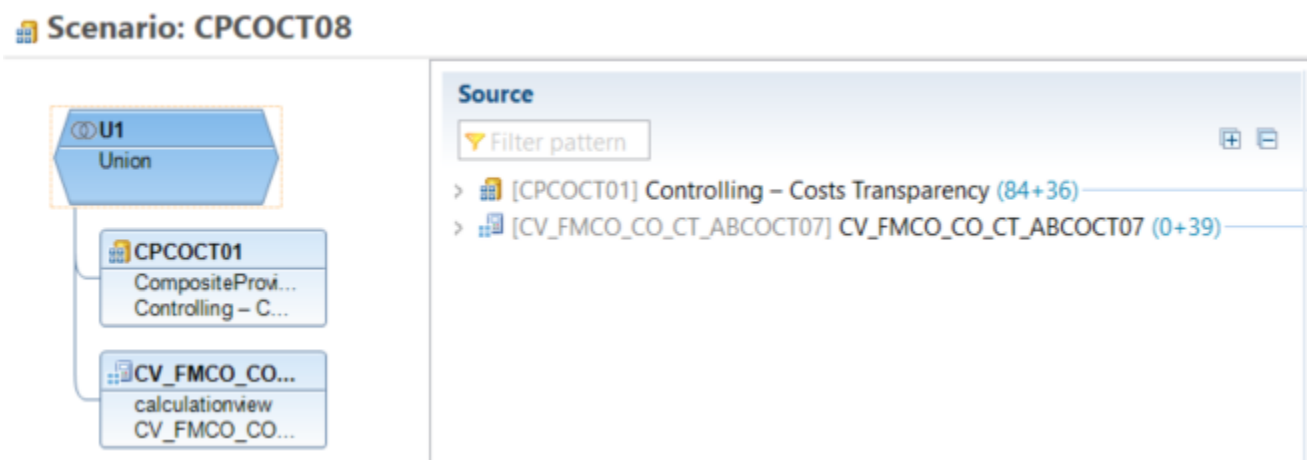
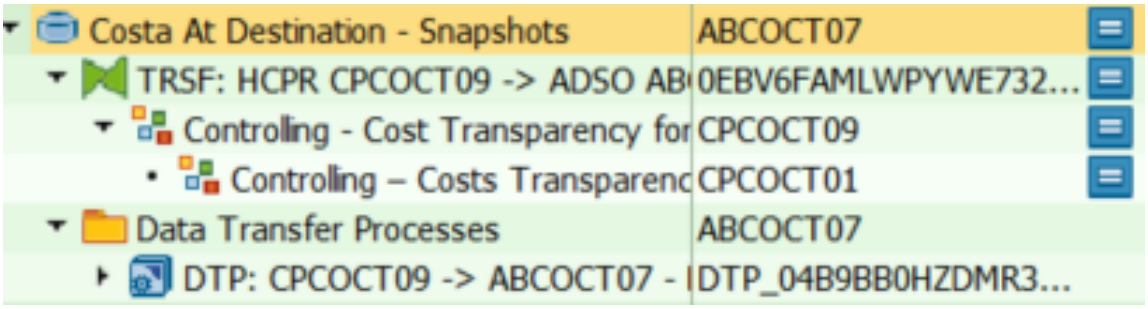
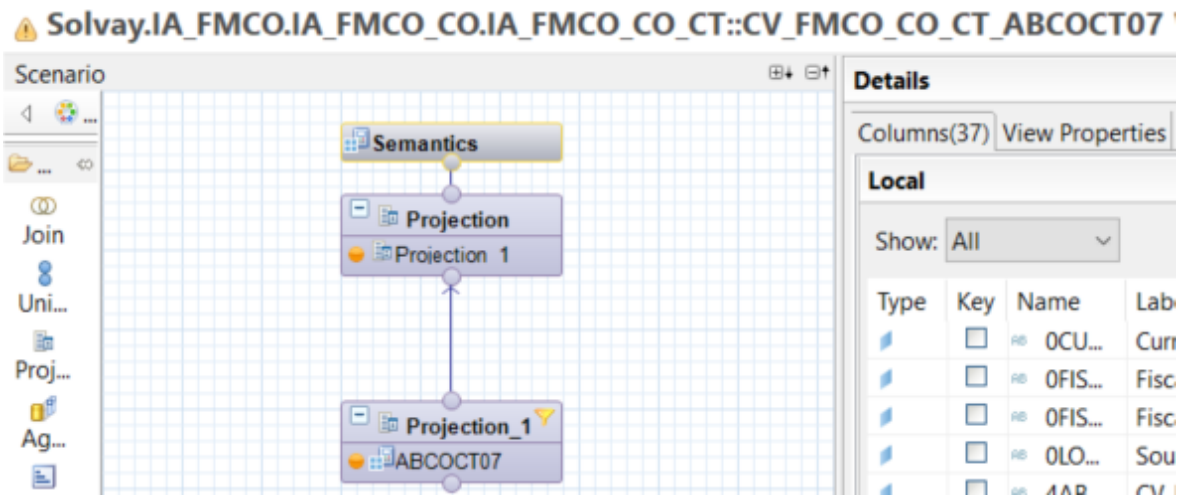
Snapshots for Control Check

Composite Provider CPCOCT08 allows users to compare current data with weekly/on demand snapshot saved in ADSO ABCOCT07.



ABCOCT07 is loaded from Composite Provider CPCOCT09, copy of CPCOCT01 without Input Parameters. The Input Parameters "Fiscal Period From" and "Fiscal Period To" are restored in Calculation View CV_FMCO_CO_CT_ABCOCT07, to facilitate union between Snapshot data and Current data.





Each Snapshot is timed and dated, and named following the pattern "Pyymmdd". Snapshots past a certain time (in months, stored in C_GLBFILT 001 for Stream COSTA and Rule SNAPSHOT) are deleted from history.

A snapshot is taken every Saturday though Process Chain **PC_CO_CT_01**, but one can also be taken manually through Transaction **ZBW_COSTA_SNAP**.

Users can access the data through query **BW_QRY_CPCOCT08_0001** "COSTA - Snapshot vs Current Comparison (Core Query)"

Should snapshot data appear to be doubled/tripled, display C_TIMEP (Snapshot Time) to check that multiple snapshots were not taken the same day, which would explain that result in the query.

Note: Data should be loaded through DTP without "SAP HANA Extraction" checked. That check changes the way data is extracted from CPCOCT09 and generates erroneous totals for K_INTRAT.

Anaplan Budget & BE Import

Anaplan sends its Budget and Best Estimate data, both for Origin and Bridge Destination, to a folder on Application Server: **/export/BW /Anaplan_inbound.**

Origin data is collected through ADSOs APCOCT21 and ABCOCT08.

Costa - Anaplan Origin Budget & BE	ABCOCT08
ADSO ABCOCT08 -> ADSO ABCOCT08	05NL40D8HRRLMZS0IA...

TRSF: DTS_ANAPLAN_BUD_TOP_L4 -> ADSO APCOCT21	0C4PG9K8A81BE5CIQB...
TRSF: DTS_ANAPLAN_BUD_TOP_L5 -> ADSO APCOCT21	0PXJXL0OYFQII62JKS...
TRSF: DTS_ANAPLAN_ESTIMATE_OOS -> ADSO APCOCT21	0E2TLCU12L06WWKQP...
TRSF: DTS_ANAPLAN_ESTIMATE_TRAN -> ADSO APCOCT21	0G5YZ59ZHCK501HHH...

Bridge Destination data is collected through ADSOs APCOCT22 and ABCOCT09.

Costa - Bridge destination Budget & BE	ABCOCT09
ADSO ABCOCT09 -> ADSO ABCOCT09	0KCXX3S70OMZ8W3S2...
TRSF: ADSO APCOCT22 -> ADSO ABCOCT09	0D2BU6LTWWVJADQB...
Costa - Bridge destination Budget & BE	APCOCT22
TRSF: APCOCT22 -> APCOCT22	0PWJTJZ8LJQ7EMHE22...
TRSF: DTS_ANAPLAN_BRG_BEST -> ADSO APCOCT22	0OPLIB5UXYB4M3CHH...
TRSF: DTS_ANAPLAN_BRG_BUDGET -> ADSO APCOCT22	0J1GINUDF4FMQ9ACN...

Both dataflows are loaded in parallel using the same Process Chains, one for Budget data and one for Best Estimate

Process Chain	Process Chain Description	Period
PC_CO_CT_05	COSTA - TD - Anaplan Best Estimate Destination	Monthly on 13th workday of the month in Calendar 50
PC_CO_CT_06	COSTA - TD - Anaplan Budget Destination	Yearly on 13th workday of July in Calendar 50

Users can request to have either chain running in addition to these default periods.

For Budget, initial load is done in July, with corrective/definitive values entered between September and November (daily updates required during that period).

Each source Flat File is assigned to a C_SRC_ANA (Source Anaplan) value, which is used to identify the dataflow, and offers a single KF for the Propagation ADSO associated.

For example, DTS_ANAPLAN_BESTIMATE_ADJ, DTS collecting adjustments for Origin Best Estimate, initiates KF K_ADJ_BESTIM in APCOCT21, with C_SRC_ANA = 'SRC_ADJ_BESTIM'.

Most important line of code at this level is this, identical in all transformations to APCOCT21/22, except for the name of the KF and the values of C_SRC_ANA (see above) and C_VERSN2 (F01 for BE and 000 for Budget):

```
LOOP AT ITB_TIME ASSIGNING <FS_TIME>.
  UPDATE /BIC/AAPCOCT212 SET K_ADJ_BESTIM = 0
                             C_FLG_OBS    = 'X'
  WHERE C_TIME = <FS_TIME>-C_TIME
  AND /BIC/C_SRC_ANA = 'SRC_ADJ_BESTIM'
  AND C_VERSN2 = 'F01'.
ENDLOOP.
IF SY-SUBRC = 0.
  COMMIT WORK.
ENDIF.
```

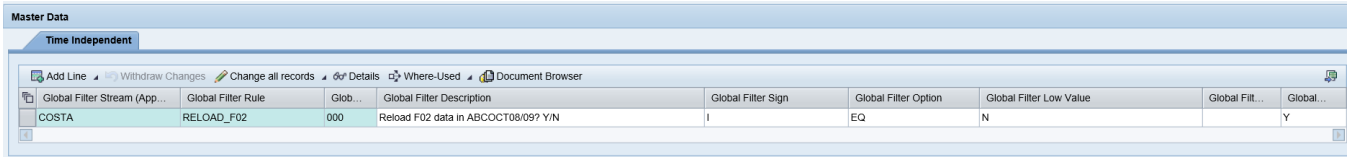
SRC_ADJ_BESTIM	9		C_SRC_ANA	/BIC/C_SRC_ANA		Source Anaplan	CHAR	000020
F01	10			C_VERSN2		Version	CHAR	000003
ANAPL_EST	12			C_FLOW		C_flow	CHAR	000016
Empty	13			C_FLG_OBS		Flag Obsolete	CHAR	000001
K_BESTIMATE	14			K_BESTIMATE		Best Estimate	FLTP	000016
K_ADJ_BESTIM	15			K_ADJ_BESTIM		Adj B. Estimate	FLTP	000016

This code sets all existing entries from the same source to Flag Obsolete = 'X', while the transformation loads actual data with Flag Obsolete = ''. Thus, all data deleted from the source file are marked as obsolete in the Propagation ADSO once the transport is complete. The transformation of the ADSO on itself (APCOCT21 APCOCT21 and APCOCT22 APCOCT22) set RECORDMODE = D to all obsolete entries, so they are removed from Business level when the Delta load runs.

The quarters of the period to be flagged as obsolete in Propagation layer (and then to be deleted) are manually maintained in the Global Filter : one for Budget (COSTA/PERIOD_000) and one for BE (COSTA/PERIOD_F01).

These values must be manually adapted when changing the loaded year.

Global Filter Stream...	Global Filter Rule	Global Filter	Global Filter Description	Global Filter Sign	Global Filter Option	Global Filter Low Value	Global Filter Hight Value	Global Filter Active
COSTA	PERIOD_000	001	Delete Quarters 000 data in APCOCT21/22 before reload	I	EQ	Q1 FY22		Y
COSTA	PERIOD_000	002	Delete Quarters 000 data in APCOCT21/22 before reload	I	EQ	Q2 FY22		Y
COSTA	PERIOD_000	003	Delete Quarters 000 data in APCOCT21/22 before reload	I	EQ	Q3 FY22		Y
COSTA	PERIOD_000	004	Delete Quarters 000 data in APCOCT21/22 before reload	I	EQ	Q4 FY22		Y
COSTA	PERIOD_F01	001	Delete Quarters F01 data in APCOCT21/22 before reload	I	EQ	Q1 FY22		Y
COSTA	PERIOD_F01	002	Delete Quarters F01 data in APCOCT21/22 before reload	I	EQ	Q2 FY22		Y
COSTA	PERIOD_F01	003	Delete Quarters F01 data in APCOCT21/22 before reload	I	EQ	Q3 FY22		Y
COSTA	PERIOD_F01	004	Delete Quarters F01 data in APCOCT21/22 before reload	I	EQ	Q4 FY22		Y



For each monthly run, Best Estimate history is saved by moving existing data from version F01 to F02. Whether this save is done or not depends on the value of Global Filter COSTA/RELOAD_F02 above. Low Value should be 'Y' by default, changed to 'N' when manually reloading Best Estimate data.

Destination manually loading

There is a decision in processs chain PC_CT_DEST_SCHE_01 to not load data outside a range of day, so if necessary change the range of day in master data global filter:

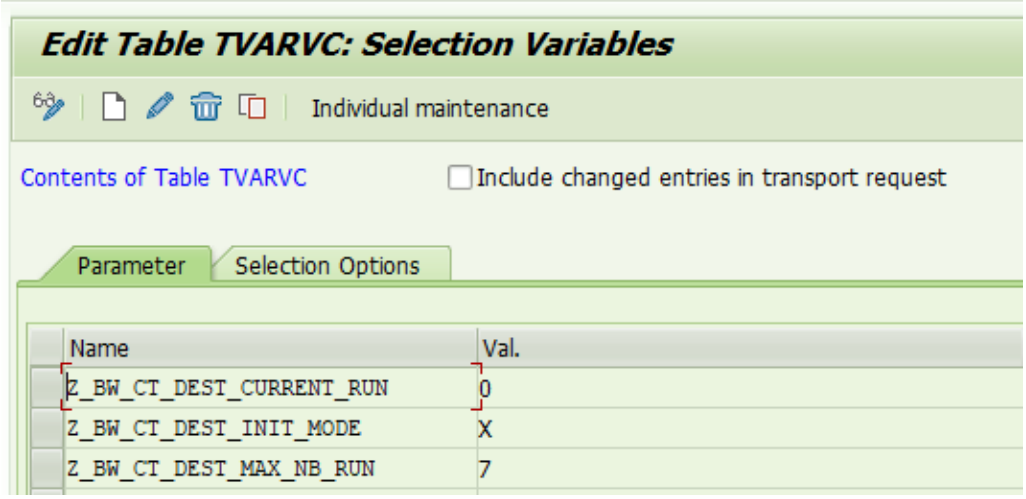
Table: /BIC/PC_GLBFILT

/BIC/C_STRE...	/BIC/C_RULE	/BIC/C_GLBFILT	OBJVERS	CHANGED	/BIC/C_DESC	/BIC/C_SIGN	/BIC/C_OPTION	/BIC/C_LOW	/BIC/C_HIGH	/BIC/C_ACTIVE
COSTA_DEST	RANGE_DAY	001	A		Work. Day for PC_CT_DEST_SCHE_01	I	BT	3	7	Y

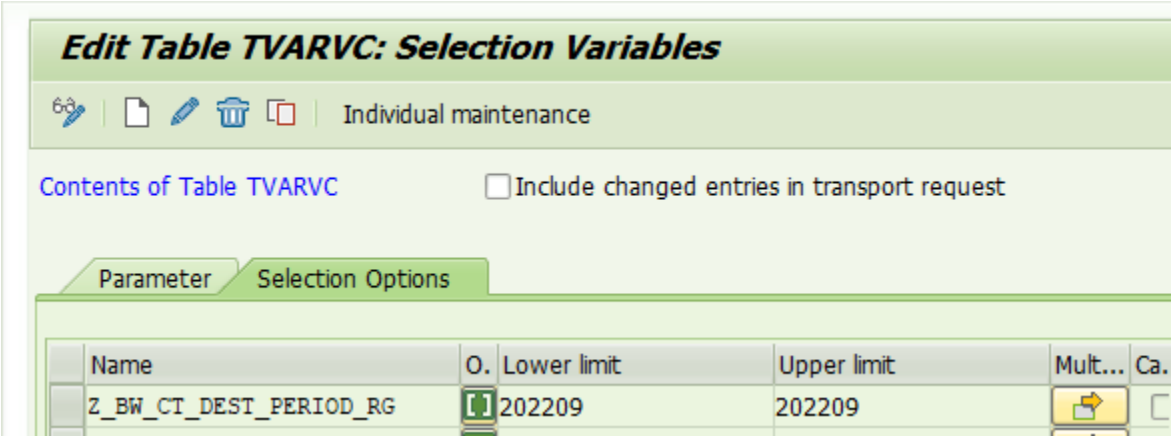
1) Update TVARV table

SM30 TVRAV

In parameter, check current run is equal to 0, macimum number run equal 7 and put X to init mode.



In selection option, if necessary change the date (by default is the current month - 1):



2) Execute process chain PC_CT_DEST_SCHE_01 (with transaction se37 RSPC_API_CHAIN_START).

Planned Evolution

Anaplan Budget & BE Import

1) Process Chain Budget will likely be modified to run daily, with test process to either execute dummy program or complete PC run depending on a Global Filter to be set manually OR through event when new file is added to AL11.

2) The way Budget adjustments are handled, with Top-Down and Bottom-Up adjustments on multiple levels, will be updated and simplified later this year (2022).
