

DFS TD - Synthesis - Operational Schemas

The following schemas are a diagrammatic representation of the operation mode for each step to get the data available to the reports and dashboards. They will help the understand the architecture and functioning of this data platform.

Attention

All the schemas available on this page are included on other pages as their own content. The changes will reflect automatically.

All the syntheses schema are available on google Drive for further edition :

Big Data & Analytics > #134 - Data Management Platform for Silica > 06 - Documentation > Schemes > [Silica - Synthesis - Schema](#)
