

Relative Humidity Conditioning

Alpharett ADL has 5 chambers for long term relative humidity and temperature conditioning.

These R.H. chambers have an operating range between 35 - 90°C, and between 20 - 95% relative humidity.

R.H. conditioning is typically used for moisture uptake studies. These studies can either be for a set amount of hours, or until the part reaches equilibrium (according to ISO 1110).
