

# CNV-9013 TB CY (0L - IFRS = 31 GC Val Ledger) Monthly Movement

|              |   |
|--------------|---|
| Status       |              |
| Owner        | Soumen Laru   |
| Stakeholders | <a href="#">PILLAY-ext</a> , <a href="#">Lawrence GARCIA-ext</a> , <a href="#">Angel Luis</a> |

## Purpose

The purpose of this document is to outline the **conversion approach for migrating Trial Balance – Prior Year (TB CY)** data into **SAP S/4HANA**. This dataset represents the **opening balances** for **FY2026** (for **Group 1** company codes) and **FY2027** (for **Group 2** company codes).

The legacy trial balance data includes **document currency**, **local currency**, and **group currency** amounts. All currencies will be migrated accordingly, unless there are design changes affecting **local or group currency configurations**. Exchange rates will be applied based on **historical posting rates for each period end**.

## Conversion Scope

This document outlines the approach for converting **Trial Balance – Current Year (TB CY)** data from **legacy source systems** into **SAP S/4HANA**, in alignment with the **target design and migration strategy**.

### Relevancy criteria:

As per the current implementation plan, there will be **two separate go-live waves**:

- **Group 1: Go-live on 1st July 2028**
  - TB migration scope: **1.5 years of balances**, starting from the **Opening Balance as at January 2027**. It will be posted on the last day of the prior year's final posting period, followed by a carry-forward. Therefore, The opening balances for January 2027 will be migrated as the closing balances from 2026 after the execution of a balance carry-forward by the business in ECC (Legacy system).
- **Group 2: Go-live on 1st January 2029**
  - TB migration scope: **1 years of balances**, starting from the **Opening Balance as at January 2028**. It will be posted on the last day of the prior year's final posting period, followed by a carry-forward. Therefore, The opening balances for January 2028 will be migrated as the closing balances from 2027 after the execution of a balance carry-forward by the business in ECC (Legacy system).

### Basic Selection criteria from source table BSEG:

| Field (BSEG) | Selection rule               | Details  |
|--------------|------------------------------|--|
| BUKRS        | Company codes in scope       | Based on Grp 1 and Grp 2 in scope maintained in ADM construct page                 |
| GJAHR        | Last two closed fiscal years | For Grp 1 go-live, RYEAR in ( 2027 , 2028 )<br>For Grp2 go-live, RYEAR in ( 2028 ) |

**Exclusion:** [A Data Construction Sheet](#) will be created to list all local accounts, enabling their exclusion from the leading ledger migration. The migration of balances for local accounts will be described in their relevant specs 9014 and 9016.

| Source System | Account Number | Account Type |
|---------------|----------------|--------------|
| PF2           |                | Local        |
| WP2           |                | Local        |
| PI2           |                | Local        |

← Prior Year/Opening
← Current Year →

Following migration, the **carry-forward of balances** into the next fiscal period will be performed by the business.

Accordingly, the **migration posting dates** for opening balances will be as follows:

- For **January 2027**, posting date: **31st December 2026**
- For **January 2028**, posting date: **31st December 2027**

List of source systems and the approximate number of records. Balances from all three systems must be extracted in full.

|     |       |  |        |  |
|-----|-------|--|--------|--|
| PF2 | TB CY |  | S4HANA |  |
| WP2 | TB CY |  | S4HANA |  |
| PI2 | TB CY |  | S4HANA |  |

## Additional Information

The **Balance Sheet migration approach** will vary depending on the type of **General Ledger (GL) Account**, as outlined below:

1. **Non-Open Item Managed Balance Sheet Accounts**
2. **Open Item Managed Balance Sheet Accounts**
3. **Reconciliation (Control) Accounts**, including **Inventory Accounts**

The migration of Balance Sheet account balances will be executed in **two stages**:

### 1. Opening Balances

- Opening balances will be migrated to establish the financial position at the start of the target fiscal year. For **Group 1 company codes**, the migration will be based on balances as at **31st December 2026**, and for **Group 2 company codes**, as at **31st December 2027**, in line with the current go-live schedule.

### 2. Year-to-Date (YTD) Periodic Movements

- Monthly balance movements will be migrated progressively up to the following cut-off periods:
  - **Group 1 company codes**: up to **30th June 2028**
  - **Group 2 company codes**: up to **31st December 2028**

This approach ensures that all interim financial movements are accurately reflected in the target system up to the designated migration period for each group

## Migration Approach and handling in each period ( **For Non-Opening Balance Periods** ) :

- For each period in scope, TB data will be migrated as **Life-to-date balances** with the **posting date set to the last day** of the respective period. This applies only to **Life-to-Date (YTD) Periodic Movements**. This applies to Life-to-Date (YTD) Periodic Movements by combining opening balance and Year-to-date balances which will be derived by accumulating all transactional postings (BSEG) for each period up to and including the target migration period.
- These entries will be **reversed using mass reversal (T-code F.80)** on the **first day of the subsequent period**. Risks will be minimised by selecting individual entities during the reversal process, ensuring that no incorrect company codes or fiscal periods are reversed accidentally.

- This approach ensures that open item managed lines are automatically **reversed and cleared** for all periods **up to (but not including)** the go-live period.

#### Approach of Migration of Balances of Sub-Ledger or Reconciliation Accounts:

- Balances related to **Reconciliation Accounts, Inventory Accounts** will **not** be migrated directly to their **actual GL accounts** as part of Trial balance Migration.
- Instead, these balances will be temporarily posted to designated **Take-On Accounts** during migration of Trial Balance ( TB). The corresponding **actual GL accounts** will be updated only at **cutover month-end**, in alignment with the migration of **subledger** or **open item** postings.
- Upon completion of go-live and the reconciliation process, all take-on accounts must be fully cleared and subsequently blocked for any future postings.

#### Approach of Migration of Balances of Open-Item Managed GL Accounts:

- For Periodic Movements Including Opening Balance, TB for open item managed accounts will be migrated into their mapped target mapped accounts. Reversal posting for each period will ensure automatic clearing of these lines items ensuring there will be no residual open item lines at the go-live period (posting date = cutover date),
- During go-live (posting date = cutover date), balances of open item–managed accounts ( Included in **CNV-9010 GL Open Items**) will be migrated into GL take-on account 5310998 (in place of the actual accounts) as part of the Trial Balance migration process. GL take-on account 5310998 is the same account as Trial Balance offset account
- Subsequently, **CNV-9010 GL Open Items** will be migrated with offset lines recorded in the trial balance offset account **5310998**, ensuring alignment between the trial balance and open item data.
- This ensures data accuracy and prevents duplicate or additional open items requiring clearing.

**Note:** The migration of GR/IR open item balances will be posted to the designated take-on accounts, while the cutover approach for transferring these balances to the actual GR/IR accounts (most probably into some manual GR/IR account ) is still pending finalization by the S2P stream.

#### Take-On Accounts for Migration of Sub-Ledger Accounts:

| Account | Description                                    | Type                                  | Generic Code ( For Illustration Purpose ) |   |
|---------|--|---------------------------------------|---|---|
| 1199999 | Fixed Asset Take-on Account - Intangibles      | Legacy Data Assets Take on Account    | ZZ00000006                                | Legacy Data Assets Take on Account                  |

| 5310999 | Current Non-Trade AP Take-on - External        | Legacy Data AP Take on Account        | ZZ00000004                                | Legacy Data AP Take on Account                      |
| 5360999 | Current Non-Trade AP Take-on - I/C             | Legacy Data AP Take on Account        | ZZ00000004                                | Legacy Data AP Take on Account                      |
| 5210997 | GR/IR Take-on - Freight & Customs              | Legacy Data GR/IR Take-On Account     | ZZ00000008                                | Legacy GR/IR Take-On Account                        |
| 5210998 | GR/IR Take-on - Goods/Services                 | Legacy Data GR/IR Take-On Account     | ZZ00000008                                | Legacy GR/IR Take-On Account                        |
| 5310998 | GL Balance Migration Account                   | Legacy GL Balance Migration Account   | ZZ00000001                                | GL Balance Take-On Account ( TB Migration Account ) |

#### An very important point to be noted here.

For **non-cut-over periods**, multiple take-on accounts—"based on the GL Account Mapping for Migration"—will be used for the various sub-ledger types. However, during the **cut-over period**, only one designated account will be used for each individual sub-ledger (as listed below). Syniti team will need to apply right logic in the transformation to take care of this. Refer to Transform section for the field HKONT.

| Account | Description                                    | Type                                  | Generic Code ( For Illustration Purpose ) |   |
|---------|--|---------------------------------------|---|---|
| 1399999 | Fixed Asset Tangibles (PP&E) - Take-on Account | Legacy Data Assets Take on Account    | ZZ00000006                                | Legacy Data Assets Take on Account                  |
| 2210999 | Trade AR External - Take-on                    | Legacy Data AR Take on Account        | ZZ00000003                                | Legacy Data AR Take on Account                      |
| 5210999 | Current Trade AP Take-on - External            | Legacy Data AP Take on Account        | ZZ00000004                                | Legacy Data AP Take on Account                      |
| 2199999 | Stock Take-on                                  | Legacy Data Inventory Take on Account | ZZ00000005                                | Legacy Data Inventory Take on Account               |
| 5210997 | GR/IR Take-on - Freight & Customs              | Legacy Data GR/IR Take-On Account     | ZZ00000008                                | Legacy GR/IR Take-On Account                        |
| 5310998 | GL Balance Migration Account                   | Legacy GL Balance Migration Account   | ZZ00000001                                | GL Balance Take-On Account ( TB Migration Account ) |

**Note:** The migration GL account mapping will specify the mapping details for each sub-ledger type during non cut-over periods. A separate GL account mapping will be used to define the mapping details for each sub-ledger type specifically for the cut-over period.

### Following illustrations show how TB and Sub-Ledger Financial data migration will be carried out.

- AR Open Item migration with Respect to TB

| AR Open Items  |                             |  |                |               |                            |

**Special Requirements**

In the SAP ECC system, parallel accounting was implemented using the account-based approach. But, In the SAP S/4HANA target system, parallel accounting is instead managed through the ledger-based approach using multiple ledgers.

The **account-based approach** was implemented differently across the source systems, specifically in **PF2** and **WP2**.

In the case of **PF2**, **parallel accounting** was handled by performing **reversal postings** to designated **contra accounts**, followed by **re-postings** to the corresponding **local (main) accounts**. This approach allowed the system to maintain multiple accounting perspectives on the same transactions while ensuring that the balances in local accounts accurately reflected the intended financial position.

e.g

**Account-based Solution:**

**Example of posting scheme using account-based solution for PP&E:**

|                         | Group | Local |
|-------------------------|-------|-------|
| Acquisition value       | 120   | 100   |
| Depreciation (1st year) | 20    | 33    |

|   |    |
|---|----|
| D 6302000000 – Depreciation Expense               | 20 |
| C 1212000000 – Accumulated Depreciation           | 20 |
| D F302000001 – Depreciation Expense, local GAAP   | 33 |
| C A212000001 – Accum. Depreciation, local GAAP    | 33 |
| D A212000009 – <u>Accum.</u> Depreciation, Contra | 20 |
| C F302000009 – Depreciation Expense, Contra       | 20 |

In **SAP S/4HANA**, **parallel accounting** is implemented using a **ledger-based approach**. In this approach, each accounting principle is assigned to a **dedicated ledger**, establishing a **1:1 relationship between ledgers and accounting principles**.

TB migration strategy involves **converting the existing classic G/L** (based on the account approach) to the **new G/L**.

For the example provided, the migration will be executed into the **Local GAAP** and **IFRS ledgers**, in accordance with the sample data presented in the ECC system illustration.

**Ledger-based Solution:**

**Example of posting scheme using ledger-based solution for PP&E:**

|                         | Group | Local |
|-------------------------|-------|-------|
| Acquisition value       | 120   | 100   |
| Depreciation (1st year) | 20    | 33    |

|   | 0L (IFRS) | LG (Local GAAP) |
|---|-----------|-----------------|
| D 6302000000 – Depreciation Expense     | 20        | 33              |
| C 1212000000 – Accumulated Depreciation | 20        | 33              |

In the case of **WP2**, **parallel accounting** was handled by performing **Delta postings** to the corresponding **local (main) accounts**. This approach allowed the system to maintain multiple accounting perspectives on the same transactions while ensuring that the balances in local accounts accurately reflected the intended financial position.

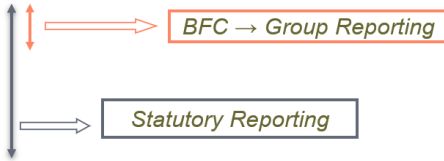

e.g

Account-based Solution(WP2):

Example of posting scheme using account-based solution for PP&E:

|                         | Group | Local |
|-------------------------|-------|-------|
| Acquisition value       | 120   | 100   |
| Depreciation (1st year) | 20    | 33    |

|   |    |
|---|----|
| D 6302000000 – Depreciation Expense             | 20 |
| C 1212000000 – Accumulated Depreciation         | 20 |
| D F302000001 – Depreciation Expense, local GAAP | 13 |
| C A212000001 – Accum. Depreciation, local GAAP  | 13 |

In SAP S/4HANA, parallel accounting is implemented using a ledger-based approach. In this approach, each accounting principle is assigned to a dedicated ledger, establishing a 1:1 relationship between ledgers and accounting principles.

TB migration strategy involves converting the existing classic G/L (based on the account approach) to the new G/L.

For the example provided, the migration will be executed into the Local GAAP and IFRS ledgers, in accordance with the sample data presented in the ECC system illustration.

Ledger-based Solution (WP2):

Example of posting scheme using ledger-based solution for PP&E:

|                         | Group | Local |
|-------------------------|-------|-------|
| Acquisition value       | 120   | 100   |
| Depreciation (1st year) | 20    | 33    |

|   | 0L (IFRS) | LG (Local GAAP) |
|---|-----------|-----------------|
| D 6302000000 – Depreciation Expense     | 20        | 20+13           |
| C 1212000000 – Accumulated Depreciation | 20        | 20+13           |

Separate conversion specs describe the migration of balances into local accounts. To maintain simplicity, a Data Construction Sheet will be created to list all local accounts, enabling their exclusion from the leading ledger migration. The migration of balances for local accounts will be described in the following two conversion specifications:

- CNV-9016 TB PY (Legal Val - Local GAAP) - Opening balance
- CNV-9014 TB CY (Legal Val - Local GAAP) mntly mvmt - Periodic movement.

In general, account numbers (Legacy SAKNR from the source tables) that begin with an alphabetic character (A-Z) are considered Local Accounts and should therefore be excluded from the IFRS trial balance migration.

The Trial Balance migration executed through the object 'CNV-9013 TB CY' will post values to both the IFRS and Local (LG) ledgers. Subsequently, the Local Ledger (LG) will be migrated again using 'CNV-9014 TB CY (Legal Val - Local GAAP) mntly mvmt', which will recalculate the legacy local account balances and adjust for the amounts already posted via 'CNV-9013 TB CY'.

## Target Design

The technical design of the target for this conversion approach.

## Data Cleansing

| ID  | Criticality | Error Message/Report Description | Rule | Output | Source System |
|-----|-------------|----------------------------------|------|--------|---------------|
| N/A |             |                                  |      |        |               |

## Conversion Process

The high-level process is represented by the diagram below:

## Data Privacy and Sensitivity

## Extraction

Extract data from a source into . There are 2 possibilities:

1. The data exists. connects to the source and loads the data into . There are 3 methods:
  - a. Perform full data extraction from relevant tables in the source system(s).
  - b. Perform extraction through the application layer.
  - c. Only if ; cannot connect to the source, data is loaded to the repository from the provided source system extract/report.
2. The data does not exist (or cannot be converted from its current state). The data is manually collected by the business directly in . This is to be conducted using DCT (Data Collection Template) in

The agreed Relevancy criteria is applied to the extracted records to identify the records that are applicable for the Target loads.

**Note:** Although both DCT-based data and extraction-based data approaches are possible, the extraction-based data option applies in this case.

## Extraction Run Sheet

| R<br>e<br>q<br># | Requirement description  | Team responsible   |
|------------------|--|--------------------|
| 1.               | Ensure that the source tables <b>GLT0</b> (for the company codes within scope for each group and fiscal years <b>covering the last two years or later</b> ) are extracted into the tool in accordance with the <b>agreed cut-off date</b> specified in the project plan. | Data team (Syniti) |
| 2.               | Ensure that all records from the source tables <b>BSEG</b> and <b>BKPF</b> are extracted into the tool in accordance with the <b>agreed cut-off date</b> defined in the project plan ( <i>to be confirmed</i> ).   | Data team (Syniti) |
| 3.               | Ensure that all the records from the source table <b>CE4F001_ACCT</b> are extracted into the tool in accordance with the agreed cut-off date defined in the project plan ( <i>to be confirmed</i> ) - <i>for the current years</i>                                       | Data team (Syniti) |

| 6. | Report extraction result to person in charge of TB conversion | Data team ( Syniti ) |
|----|---|----------------------|

## Selection Screen

| Selection Ref Screen | Parameter Name | Selection Type | Requirement | Value to be entered/set |
|----------------------|----------------|----------------|-------------|-------------------------|
| N/A                  |                |                |             |                         |

## Data Collection Template (DCT)

Target Ready Data Collection Template will be created for data with exception of some fields which require transformation as mentioned in the transformation rule.

DCT Rules

DCT is not applicable

## Extraction Dependencies

| Item # | Step description  | Team responsible  |
|--------|---|-------------------|
| 1.     | Any period / year end close activities have been fully completed  | Business          |
| 2.     | Reconciliation for intercompany payables have been completed, and adjustment made in legacy SAP system      | Business          |
| 3.     | Reconciliation of migrated Purchase Order is completed before the extraction of Accounts Payable Open Items | Business and Data |

## Transformation

The **target fields** are mapped to the corresponding **legacy source fields** through a **three-way collaboration** involving the **Business, Functional, and Data teams**. This process establishes the **necessary data transformations** to make the data **target-ready**, and typically involves the following steps:

### 1. Value Mapping and Transformation:

- Map legacy values to the corresponding **to-be values**, including the assignment of **default values** where applicable.
- Apply **transformation rules** as defined to ensure consistency and compliance with the target system requirements.

### 2. Preparation of Target-Ready Data:

- Structure and format the data according to the requirements in the **Syniti ADMM Migrate**
- Generate the **load-ready dataset**, which can then be used by the business team to perform **pre-load data validation**.

## Transformation Run Sheet

| Item # | Step description  | Team responsible     |
|--------|---|----------------------|
| 1.     | Ensure all the fields that require value mapping, as stipulated Mapping tables, have the latest signed-off mapping files imported into toolMigrate. | Data team ( Syniti ) |
| 2.     | In tool, select the Trial Balance object PY.  | Data team ( Syniti ) |
| 3.     | Go to Process Area Launch and Process the Object - Trial Balance object - R4 Trial Balance PY.  | Data team ( Syniti ) |
| 4.     | Launch the Objects to execute transformation.   | Data team ( Syniti ) |

|     |  |                      |
|-----|--|----------------------|
| 5.  | Monitor the transformation progress and ensure performance and completion is within allowed timeframe              | Data team ( Syniti ) |
| 6.  | Generate Pre-Load reports .  | Data team ( Syniti ) |
| 7.  | Generate data load count.  | Data team ( Syniti ) |
| 8.  | Log errors as defects, if any and address resolutions. Close defects.  | Data team ( Syniti ) |
| 9.  | Re-transform and re-validate the Pre-load reports if necessary.  | Data team ( Syniti ) |
| 10. | Validate the transformed file as part of pre-load validation, raise data defects or provide the pre-load sign-off. | Business             |
| 11. | Analyse and resolve any pre-load defects logged by business.   | Data team ( Syniti ) |
| 12. | Repeat steps 6 to 11 if necessary  | Data team ( Syniti ) |
| 13. | Proceed to pre-load validations  | Data team ( Syniti ) |

## Transformation Rules

The extraction of General Ledger (GL) balance data from the source system will be performed using one of the following approaches:

### Option 1 – Ledger-Based Extraction:

Periodic balances of General Ledger (GL) accounts will be extracted directly from the **GLPCT** and **GLT0** tables. This approach is recommended when the ledger tables provide a complete and reconciled view of financial balances as of the cut-over date.

In the legacy systems (**ECC – PF2, WP2, and PI2**), **document splitting** and **profit centre balancing** functionalities are not enabled. As a result, only Profit and Loss (P&L) account balances are available at the **profit centre** level within the ledger tables.

Accordingly:

- **Balance Sheet account balances** will be extracted from **GLT0**, as these balances are not maintained in **GLPCT**.
- **P&L account balances** will be extracted from **GLPCT**, where profit centre-level balances are available.
- The combined dataset from **GLPCT** and **GLT0** will provide a complete representation of all account balances required for migration.

It should be noted that records extracted from **GLPCT** contain profit centre information, whereas records from **GLT0** do not. Consequently, a significant number of account lines will not include profit centre details. These lines will need to be managed either by assigning **default profit centres** or by **allocating balances based on subledger-level data** to ensure accurate profit centre reporting in the target system.

**Note:** WP2 does not have trial balance maintained in the profit centre level and thus, there is no data in GLPCT.

### Option 2 – Transaction-Based Extraction:

All transactional line items will be extracted from the **BSEG** table and subsequently aggregated at the relevant key field level — **Company Code, GL Account, Posting Period, Fiscal Year, Profit Centre, Cost Centre, and Transaction Currency** — to derive the General Ledger (GL) balances.

This approach is suitable in scenarios where a **detailed reconstruction of balances** is required, or where **ledger tables are not fully aligned** with the underlying transactional data.

Additionally, this method enables the generation of **Trial Balances** that include both the key financial attributes (such as **Company Code, GL Account, Period, Fiscal Year, Profit Centre, Cost Centre, Transaction Currency**) and extended analytical dimensions (such as **Transaction Type, XREF1, XREF2**, etc.), thereby providing enhanced traceability and reconciliation capability.

Also, There is a requirement to migration COPA based for the relevant TB Accounts periodic balances. This can be done by reading **Profitability Segment Numbers (PAOBJNR)** from the **BSEG** data for the current year transactions. Details like Customer Number, Product Number then can be read from the table **CE4F001\_ACCT** table. This data will then be used to prepare target Profitability segment data of the relevant P&L Account periodic balances.

### Recommended Approach for S/4HANA Migration for TB-CY ( **Current Year** ):

For migration to **S/4HANA**, the **transaction-based extraction** (Option 2) is recommended for the current year data ( TB - CY ). This will provide the transaction type data and also profitability segment data. However, it involves processing a significantly larger volume of data, it should be pursued only after thorough evaluation and justification and need agreement with technical team.

**Note:** Since this CS pertains to the current year balance, **BKPF**, **BSEG** and **CE4F001\_ACC** are relevant for extraction within the scope of object number **9013**.

**Note:** for Each GL open line in scope of migration, an offset line to be created with the same GL Account.

In Migration cockpit, offset account number field is set in the same line and therefore, it will create offset line on its own. So, transformed data will be one line for each legacy in-scope line but will be automatically created with an offset line.

Posting Date ( which is generally the cut-over date ) is not part of the template, as posting date will be maintained by the Syensqo data team in the view FINSV\_MIG\_CTRL\_1. This posting date will be used across all the financial transactions migrations ( exception is Trial Balance ).

However, because the migration is performed periodically, the posting date must be updated for each period, which can be very time-consuming. To streamline the process, it would be advisable to enhance the migration cockpit object to include the posting date directly within the upload template.

| Rule # | Source System | Source Table | Source Field | Source description        | Target system | Target Table | Target Field | Load Template Field | Target description        | Transformation logic   |

## Group Currency Calculation

During the migration of GL balances from SAP ECC to S/4HANA, it was identified that group currency balances are missing. To address this, the plan is to derive group currency amounts by reading the relevant exchange rates from the BFC consolidation system for each period within the migration scope.

For each period:

- The local currency trial balance will be extracted from ECC.
- The corresponding period's exchange rate will be retrieved from BFC.
- The group currency balance will be calculated by converting the local currency amounts using the BFC exchange rates.
- The calculated group currency balances will then be loaded into S/4HANA as part of the migration process.

This approach ensures consistency between the group currency balances in S/4HANA and the consolidation system.

### Exchange Rate Table: Local Currency to Group Currency ( A DCT page to be maintained to store this information for each cycle )

| Target Company Code | Period (YYYYMM) | Local Currency | Legal Currency | Exchange Rate (Local to Legal - Currency Type 30) | Group Currency | Exchange Rate (Local to Group - Currency Type 31) | Source System (e.g., BFC) |
|---------------------|-----------------|----------------|----------------|---|----------------|---|---------------------------|
| 1000                | 202401          | EUR            | USD            | 1.10  | USD            | 1.10  | BFC                       |
| 1000                | 202402          | EUR            | USD            | 1.12  | USD            | 1.12  | BFC                       |
| 2000                | 202401          | GBP            | USD            | 1.30  | USD            | 1.30  | BFC                       |
| 2000                | 202402          | GBP            | USD            | 1.28  | USD            | 1.28  | BFC                       |
| 3000                | 202401          | CNY            | USD            | 0.14  | USD            | 0.14  | BFC                       |
| .                   | .               | .              | .              | .   | .              | .   | .                         |
| 3000                | 202402          | CNY            | USD            | 0.15  | USD            | 0.15  | BFC                       |

#### Currency Adjustment During Migration (TCURX Consideration)

In SAP, the **TCURX** table defines the **number of decimal places** used for each currency.

This impacts how amounts are **stored internally** in database tables versus how they are **displayed externally** in user interfaces or reports.

Currencies such as **JPY (Japanese Yen)**, **KRW (Korean Won)**, or **VND (Vietnamese Dong)** are typically configured with **no decimal places** (TCURX -CURRDEC = 0).

Understanding and correctly applying the **TCURX rules** is essential during **data migration** to ensure financial consistency between **ECC** and **S/4HANA**.

#### Internal vs External Currency Representation example:

|                        |  |           |   |
|------------------------|--|-----------|---|
| <b>External Amount</b> | The amount value as displayed to users in SAP screens and reports. | 96015 JPY |   |
| <b>Internal Amount</b> | The amount value stored in database tables for computation.        | 960.15    | Multiplied by factor = 10 <sup>2</sup> if target has 2 decimals |

During **data migration**, these internal (technical) amounts must be **converted to external** amounts to ensure accuracy and consistency in the **target S/4HANA system**.

#### Conversion Formula:

External Amount = Internal Amount \* 10 to the power ( 2 - Number of decimal for the currency in TCURX table )

#### How to derive profit centres for various GL balance components:

For each reporting period, balance sheet balances should ideally be allocated to the appropriate profit centres for all the accounts including balance sheet accounts. However, given the complexity involved, a more practical approach is outlined below for the balance sheet accounts.

- **Cutover Period:**  
During the cutover period, balances related to sub-ledger control accounts will already be correctly assigned to the respective profit centres from the sub-ledger side. therefore, For the **cutover period**, general ledger migration balances must be distributed by profit centre in accordance with the details outlined below. This ensures that the sub-ledger take-on account balances recorded in the general ledger can be properly offset against the sub-ledger clearing entries.
- **Prior Periods ( Including Opening balance):**  
For periods preceding the cutover, sub-ledger control account balances will be derived from the general ledger and migrated into the respective sub-ledger take-on accounts. However, these ledger-based balances do not contain profit centre details. As the balances for each period will later be reversed, unless a viable solution and compelling business case exist to justify detailed allocation given the significant complexity involved, the balances for periods prior to the cutover may be migrated using a default profit centre.

#### 1. Inventory Balance Take-on Account:

- a. PF2:

- i. Stock balance data will be derived and structured at the **profit centre level** to ensure alignment with the target S/4HANA organisational structure.
    - ii. This dataset will provide stock balances at the **material and plant level**, which in turn will be mapped to the corresponding **profit centres** based on the **material–plant–company code–profit centre** mapping logic.
    - iii. The same **distribution key** (comprising *Company Code*, *Profit Centre*, and *Stock Balance*) will be applied to allocate the **stock-related take-on GL account balances**, derived from the **source ECC GL balance data**, ensuring accurate and consistent **inventory take-on balances** at the profit centre level.
  - b. WP2:
    - i. Stock balance data will be derived and structured at the **profit centre level** to ensure alignment with the target S/4HANA organisational structure.
    - ii. This dataset will provide stock balances at the **material and plant level**, which in turn will be mapped to the corresponding **profit centres** based on the **material–plant–company code–profit centre** mapping logic.
    - iii. The same **distribution key** (comprising *Company Code*, *Profit Centre*, and *Stock Balance*) will be applied to allocate the **stock-related take-on GL account balances**, derived from the **source ECC GL balance data**, ensuring accurate and consistent **inventory take-on balances** at the profit centre level.
- 2. **Fixed Assets Take-On Account**
  - a. PF2:
    - i. **Fixed Assets** are associated with Cost Centres, enabling straightforward derivation of the corresponding Profit Centres through existing master data mappings.
    - ii. Once Profit Centre mapping is established, the Asset Cost and Accumulated Depreciation balances will be segregated by Profit Centre accordingly.
    - iii. Subsequently, the Asset take-on GL account balances extracted from the source ECC GL balance data will be distributed across Profit Centres based on the derived split details, ensuring consistency between Asset subledger and General Ledger balances during migration at the profit centre level.
  - b. WP2:
    - i. Fixed Assets are associated with Cost Centres, enabling straightforward derivation of the corresponding Profit Centres through existing master data mappings.
    - ii. Once Profit Centre mapping is established, the Asset Cost and Accumulated Depreciation balances will be segregated by Profit Centre accordingly.
    - iii. Subsequently, the Asset take-on GL account balances extracted from the source ECC GL balance data will be distributed across Profit Centres based on the derived split details, ensuring consistency between Asset subledger and General Ledger balances during migration at the profit centre level.
- 3. **AR Take-On Account**
  - a. PF2:
    - i. The **Business Area** will be used to derive the corresponding **Profit Centre** to which the Business Area is assigned, for the **AR Open Item** data.
    - ii. AR Open Items will be aggregated at the Company Code and Profit Centre levels.
    - iii. The aggregated data will then be used to allocate the AR Take-on GL Account balances by Profit Centre, ensuring reconciliation and alignment between subledger and general ledger balances at the profit centre level during migration.
  - b. WP2: the profit center will be derived from the offset line of the AR open item document.
  - c. PI2: AR open items transferred to PI2 from PF2 will include the business area, and the profit center derivation process for these items will follow the approach outlined in the PF2 section. Similarly, AR open items transferred to PI2 from WP2 will include the business area, and the profit center derivation process will follow the approach detailed in the WP2 section.
- 4. **AP Take-On Account**
  - a. PF2:
    - i. The **Business Area** will be used to derive the corresponding **Profit Centre** to which the Business Area is assigned, for the **AR Open Item** data.
    - ii. AR Open Items will be aggregated at the Company Code and Profit Centre levels.
    - iii. The aggregated data will then be used to allocate the AR Take-on GL Account balances by Profit Centre, ensuring reconciliation and alignment between subledger and general ledger balances at the profit centre level during migration.
  - b. WP2: the profit center will be derived from the offset line of the AP open item document.
  - c. PI2: AP open items transferred to PI2 from PF2 will include the business area, and the profit center derivation process for these items will follow the approach outlined in the PF2 section. Similarly, AP open items transferred to PI2 from WP2 will include the business area, and the profit center derivation process will follow the approach detailed in the WP2 section.

**Note:** A default Profit Center will be maintained for each company code in **ADMM** and will be applied in cases where **Profit Center derivation is not possible** due to unavailable data.

## Transformation Mapping

| Mapping Table Name           | Mapping Table Description                              |
|------------------------------|--|
| Company Code                 | Mapping of legacy company codes to target system value |
| GL Account                   | Mapping of legacy GL accounts to target system value   |
| Profit Centre                | Mapping of legacy Profit Center to target system value |
| Cost Centre                  | Mapping of legacy Cost Centre to target Cost Centre    |
| House Bank ID and Account ID | Mapping of House Bank and Account ID                   |

**Transformation Dependencies**

List the steps that need to occur before transformation can commence

| Item # | Step Description  | Team Responsible |
|--------|---|------------------|
| 1      | Ensure all the fields that require value mapping, as stipulated. Mapping tables, have the correct values mapped and imported into tool. | Data team        |

**Pre-Load Validation****Project Team****Completeness**

| Task | Action |
|------|--------|
|      |        |

|                                       |   |
|---------------------------------------|---|
| <b>Generation of Pre-load reports</b> | <ul style="list-style-type: none"> <li>• Create a complete preload report with all the fields with source and transformed columns side-by-side.</li> <li>• Confirm mandatory key fields are populated — Company Code, GL Account, Fiscal Year, Period, Currency, Profit Centre, Cost Centre, etc.</li> <li>• Verify debit/credit amounts are numeric and decimal precision aligns with S/4 configuration.</li> <li>• Validate that mapping files for GL Account, Company Code, Profit Centre, and Cost Centre are complete.</li> <li>• Ensure all GL accounts in the TB exist in the S/4HANA chart of accounts and are correctly mapped (no obsolete or unmapped accounts).</li> <li>• Validate all profit and cost centres are active (CSKS, CEPC), not marked for deletion, and valid for the posting date.</li> <li>• Check All the Transaction Types are mapped. ( In case Option 2 (Transaction Data as source ) is used for migration)</li> </ul> |
| <b>Reconciliation of total</b>        | <ul style="list-style-type: none"> <li>• For Open-Item managed accounts, confirm that balances agree with open-item totals from <a href="#">CNV-9010 GL Open Items</a>.</li> <li>• For AR Open Items, confirm that balances agree with AR open-item totals from <a href="#">CNV-9008 AR Open Items</a></li> <li>• For AP Open Items, confirm that balances agree with AR open-item totals from <a href="#">CNV-9006 AP Open Items</a></li> <li>• For Fixed Assets, confirm that balances agree with AR open-item totals from <a href="#">CNV-1070 Fixed Assets (incl. Sub Assets)</a></li> <li>• For AUC Balances, confirm that balances agree with AR open-item totals from <a href="#">CNV-9031 Project-Actual GL Line Items (PNL-WBS for AuC)</a></li> </ul>   |

## Accuracy

| Task  | Action  |
|---|---|
| <b>Mandatory field mapping and transformation</b> | <p>Verify that local and group currency balances align as per configured exchange rates (TCURR).</p> <p>Ensure for each company code, total debits equal total credits.</p> <p>Check Balances at transaction Type level ( In case Option 2 (Transaction Data as source ) is used for migration)</p> |

## Business

### Completeness

| Task   | Action  |
|--|---|
| Verify record count and total balance in Pre-load reports an | <p>Validate that total TB balances by company code, GL account, and currency match between source and pre-load files.</p> <p>Ensure TB data aligns to the agreed migration period and fiscal year (e.g., Period 12 FY2024).</p> <p>Review and sign off on final mappings (GL, cost/profit centre, company code) for business accuracy.</p> <p>Validate reconciliation accounts (e.g., GR/IR, AR, AP, inventory) match sub ledger balances.</p> <p>Ensure there are no records posted to suspense or unmapped accounts prior to load.</p> <p>All exceptions (if any) are documented and approved with remediation actions.</p> |

### Accuracy

| Task                | Action   |
|---------------------|--|
| Conversion accuracy | <p>Compare S/4 pre-load trial balance with legacy ECC TB totals for accuracy.</p> <p>All exceptions (if any) are documented and approved with remediation actions.</p> <p>Check Balances at transaction Type level ( In case Option 2 (Transaction Data as source ) is used for migration)</p> |

## Load

Load Templates attached here. Existing load template might need modification to support specific requirements.

Source data for F...line item (2).xml

The load process includes:

1. Generate Load Export files based on the worksheet '**GL Balance**' of the load template attached. sections listed below as defined in the row 7 of the worksheet to be filled in.
  - a. Key segment
  - b. Basic Data Segment
  - c. Transaction Currency
  - d. Company Code Currency
  - e. Group Currency
  - f. Freely Defined Currency
  - g. Account Assignment
  - h. Assignment to a Profitability Segment (CO-PA) - Coding Block
2. Execute the automated data load into target system using load tool or product the load file if the load must be done manually
3. Once the data is loaded to the target system, it will be extracted and prepared for Post Load Data Validation

## Load Run Sheet

| Item | Step description  | Team responsible |
|------|---|------------------|
| 1    | Ensure the load tools are transported into the correct tool instance.   | Data team        |
| 2    | Ensure DCTs and all required mappings are submitted and complete  | Data team        |
| 3    | Ensure Pre-load sign-offs are obtained.   | Data team        |
| 4    | Execute tool Trial Balance Upload   | Data team        |
| 5    | Generate the post load reports in tool.   | Data team        |
| 6    | Log errors as defects, if any and address resolutions. Close defects.   | Data team        |
| 7    | Resolve defects by reupload and re-generate post load reports if necessary.   | Data team        |
| 8    | Business to validate the post load files as part of post-load validation, raise data defects or provide the post-load sign-off.   | Business         |
| 9    | Repeat steps 5 to 7 if necessary.   | Data team        |
|      | Reversal Postings ( Using F.80 ) - Mass Processing  |                  |
| 10   | <ul style="list-style-type: none"><li>• Retrieve the list of FI documents along with their respective company codes and fiscal years.</li><li>• Simulate the reversal process in <b>F.80</b> to verify posting accuracy.</li><li>• Execute the reversal in <b>F.80</b> once the simulation results are validated.</li></ul> | Data team        |

## Load Phase and Dependencies

### Configuration

| Item # | Configuration item   |
|--------|--|
| 1.     | Company code-related configuration (posting period variant).                   |
| 2.     | Finance posting (document types, document number ranges, special gl indicator) |
| 3.     | Currencies (currency keys, decimal places in currencies)                       |

### Conversion Objects

| Object # | Preceding Object Conversion Approach            |
|----------|---|
| 1067     | GL Account Operational CoA (incl. secondary CE) |
| 1073     | Profit Center                                   |
| 1074     | Cost Centre                                     |

### Error Handling

| Error type                   | Error description                            | Action taken   |
|------------------------------|--|--|
| Posting Period Error         | Posting period is blocked for posting        | Review project / cutover plan and ensure posting periods can be opened for postings        |
| Profit Centre does not exist | Profit Centre does not exist in company code | Ensure the profit Centre mapping is correct and or create the profit Centre if it is valid |
|                              |  |  |

## Post-Load Validation

### Project Team

### Completeness

Summary Balance  
using Fiori App

## Run GL Balance Report for Post-Load Trial Balance Check (Using Fiori App)

### Objective:

Validate migrated Trial Balance (TB) data after load by running the General Ledger balance report in S/4HANA.

### Steps:

1. **Access the Fiori Launchpad.**  
Log in to the SAP Fiori Launchpad with the appropriate financial reporting role.
2. **Open the Fiori App:**  
Navigate to and open “**Display G/L Balances**” (App ID: *F0718*)

*Alternate app names: “G/L Account Balances – Display” or “Display Line Items in General Ledger” (F0708) depending on configuration.*

3. **Enter Selection Criteria:**

- **Company Code:** Enter the relevant company code(s).
- **Fiscal Year / Period:** Specify the migration fiscal year and period.
- **Ledger:** Choose the appropriate ledger (e.g., *OL – Leading Ledger*).
- **G/L Account Range:** Enter the account range or leave blank for all.
- **Currency:** Select local or group currency as required.

4. **Execute the Report.**  
Click **Go** to generate the balance report.

5. **Validate Results:**

- Confirm that total **debits equal credits** for each company code.
- Compare balances with the **pre-load TB** or **legacy TB** extract.
- Review Profit Centre and Cost Centre-level balances for accuracy.
- Ensure no postings appear in **suspense or unmapped accounts**.

6. **Download / Export Results:**

Export the report to Excel for reconciliation and business sign-off documentation.

## Accuracy

| Task              | Action  |
|-------------------|---|
| Open items totals | <p>Check business partner open item totals by Business partner, Company code, profit Centre. Totals should be checked in Document, Local and Group currency.</p> <p>Review financials under group currency and ensure alignment with group consolidation requirements. ( Based on currency exchange rate )</p> <p>Validate reports such as Trial Balance, GL Line Item Report, and Financial Statements in Fiori / SAP GUI match legacy totals.</p> <p>Review financials under group currency and ensure alignment with group consolidation requirements.</p> |
