

# Biogenic Validated Product List

## General description:

The Biogenic Validated Product List Dashboard provides a detailed overview of biogenic carbon data for commercial products and finished materials. It enables users to assess and compare the biogenic CO removals, biogenic carbon content (BCC), total carbon content (TCC), and renewable carbon index (RCI) across a wide range of products. This dashboard supports sustainability initiatives by offering transparent and validated data on the renewable carbon footprint of products.

## Filters :

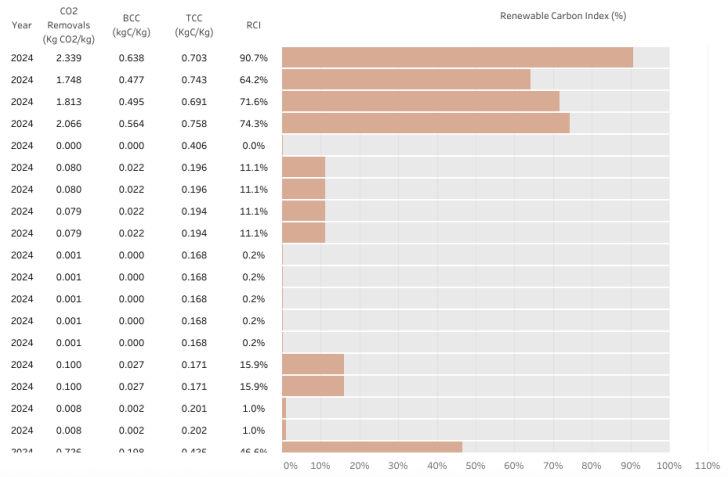

At the top of the dashboard, users can refine the displayed data using several filters:

- **Year:** Select the reporting year for the data.
- **GBU (Global Business Unit):** Filter by business unit for focused analysis.
- **Site:** Focus on specific manufacturing sites.
- **Commercial Product:** Choose a particular commercial product.
- **Material Name:** Filter by specific material names

## Panels and Key Features:

**Main Table (Central Panel):**

- Displays a list of commercial products and finished materials, along with key attributes such as Material Name, Commercial Product, GBU, Site, and Year.
- Shows detailed biogenic carbon metrics for each product:
  - **CO Removals (kg CO/kg):** Amount of CO removed through biogenic processes.
  - **BCC (Biogenic Carbon Content, kgC/kg):** The mass of biogenic carbon present in the product.
  - **TCC (Total Carbon Content, kgC/kg):** The total carbon content in the product.
  - **RCI (Renewable Carbon Index, %):** The percentage of renewable carbon in the product.
- Includes a horizontal bar chart for each product, visually representing the Renewable Carbon Index (RCI) for easy comparison.
