

Validated Product List

General description:

The Validated Product List Dashboard offers a consolidated view of the **validated** Product Carbon Footprint for commercial products and finished materials. It enables users to review, compare, and validate PCF values, including biogenic CO2 removal, across a wide range of products. This dashboard supports sustainability reporting, product benchmarking, and data quality assurance by providing transparent and standardized carbon footprint metrics.

Filters :

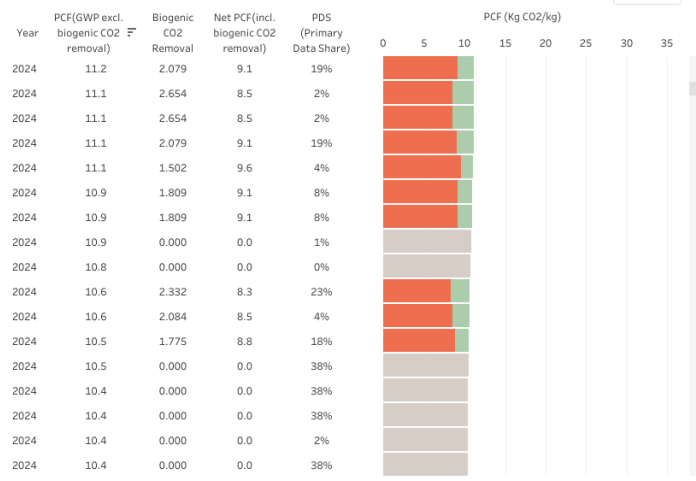

At the top of the dashboard, users can refine the displayed data using the following filters:

- **Year:** Select the reporting year for the data.
- **GBU (Global Business Unit):** Filter by business unit for targeted analysis.
- **Site:** Focus on specific manufacturing sites.
- **Commercial Product:** Choose a particular commercial product.
- **Material Name:** Filter by specific material names.

Panels and Key Features:

Main Table (Central Panel):

- Displays a list of commercial products and finished materials, along with key attributes such as Material Name, Commercial Product, GBU, Site, and Year.
- Shows detailed PCF metrics for each product:
 - **PCF (GWP excl. biogenic CO2 removal):** The product's carbon footprint excluding biogenic CO2 removal.
 - **Biogenic CO2 Removal:** The amount of CO2 removed through biogenic processes.
 - **Net PCF (incl. biogenic CO2 removal):** The net carbon footprint after accounting for biogenic CO2 removal.
 - **PDS (Primary Data Share):** The percentage of primary data used in the calculation.
- Includes a horizontal bar chart for each product, visually representing the breakdown of PCF, net PCF, and biogenic CO2 removal.

Export Functionality (Right Panel):

- The "Export Data" button allows users to download the complete dataset, providing access to additional columns and more detailed information not shown in the dashboard view.

Legend (Bottom Panel):

- A color-coded legend helps users interpret the bar chart, distinguishing between PCF (excluding biogenic CO2 removal), Net PCF, and Biogenic CO2 Removal.
