

# CNV-9106-Output determination for application V1/V3

Status	Approved
Owner	THOMAS-ext, Ety
Stakeholders	

## Purpose

This document defines the conversion approach for migrating Sales (V1) and Billing (V3) output condition records from SAP ECC to SAP S/4HANA, based on a new BRF+-driven output management strategy.

This document introduces a new approach to migrating output management, shifting from the legacy ECC output condition record model to a simplified, rules-driven BRF+ framework. It describes the end-to-end migration process, covering data extraction and transformation (by Syniti), functional transformation (by the Functional Team), and loading into BRF+ decision tables (by the functional team)—ensuring alignment with overall project governance and design principles.

### New Approach: BRF+ Output Simplification

- Merge multiple legacy ECC output types (e.g., ZC10,ZC11,ZARM...) into a single BRF+-driven output type, e.g. ORDER\_CONFIRMATION to simplify maintenance and governance.
- Global template layout per output type (as much as possible)
- Minimize the creation of outputs that are rarely triggered, focusing on high-value and frequently triggered scenarios.
- Avoid using business partners or email addresses as decision table input parameters. Instead, leverage business partner attributes to determine the appropriate outputs and channels. This approach requires that the relevant attributes be maintained during Business Partner migration, aligned with the existing output conditions.

### Key Implications:

- There will be no direct one-to-one mapping between ECC output condition records and BRF+ decision tables. Instead, this approach will use a rules-based model that covers the majority of business scenarios and reduces operational complexity.
- The new model will establish and maintain output determination records—including email recipients, output channels, and Business Partner–related output conditions—within BRF+.
- The transformation builds upon the configuration and master data currently maintained under the Classic Output Management (NAST framework) in ECC, adapting it to the BRF+ governance structure in S/4HANA.
- The tables referenced in this document are intended to illustrate the rationale behind the BRF+ decision tables.
- Similarly, the legacy tables extracted from ECC will not be migrated as-is. Instead, they will serve as a reference to support the migration and transformation of the relevant objects into the S/4HANA target design.

## Conversion Scope

The conversion scope covers the extraction, transformation, and loading of output determination data from Classic Output Management (NAST-based framework) into BRF+ Output Parameter Determination (OPD) in S/4HANA, ensuring both initial migration and interim synchronization until full adoption of BRF+ is achieved.

### The scope includes:

- Extraction of customer-related output condition records (e.g., for Sales Orders, Scheduling Agreements, Invoice and Credit and Debit memos) from Classic Output Management, including associated communication details such as email addresses, language, and output channels;
- Mapping of Classic condition record keys (application, condition type, key combination) to BRF+ OPD parameters (e.g., Document Type, Output Type, Sales Organization,);
- Transformation of medium and dispatch settings from Classic (e.g., NAST medium codes) to BRF+ equivalent channels (e.g., Email, Print, EDI), ensuring compatibility with S/4HANA Output Management settings;
- Initial Load of the transformed dataset into BRF+ Output Parameter Determination using the OPD framework and/or BRF+ application data load methods;
- Validation to ensure that migrated BRF+ records produce identical output results as their Classic counterparts for equivalent sales scenarios.

### Out of Scope:

- Migration of output determination for applications outside of sales (e.g., MM Purchasing outputs);
- Migration of outputs no longer managed in S/4: **Quotations and Contracts** (Managed in Salesforce)
- Migration of output no longer in scope of Sales (V1): SDB outputs (managed in Delivery)
- Modifications to customer master data beyond the email and communication fields required for BRF+;
- Changes to output form templates (Smartforms/Adobe Forms) beyond what is required for enabling BRF+.

### The data from legacy system includes:

1. Active output condition records for Sales (Application V1 and V3) linked to customers (Partner Function SP, BP,PY, CONTACTS) with maintained communication details (email address, fax, etc.)
  - a. Output types relevant for Sales Orders, Invoices and memos and Scheduling Agreements that are in active use in the business process
2. Records with valid medium settings (e.g., Email, Print, EDI) compatible with S/4HANA BRF+ output channels
3. Active records where the deletion indicator (LOEKZ) is initial.
4. Language assignments that are valid in the target system

**The data from legacy system excludes:**

1. Obsolete, expired, or logically deleted output condition records
2. **Output** condition records for customers not in scope of the [CNV-3003 Business Partners - Customer \(Sales and Service\) - FLCU01](#)
3. Output condition records for Sales areas not in scope.
4. Output types not used in the current or target S/4HANA sales processes
5. Records with incomplete or invalid communication data (e.g., missing email for email output medium)
6. Condition records belonging to applications other than sales (e.g., LE, MM, FI outputs)

**Data Profiling**

The table below based on the entries in the table NAST outlines the legacy configuration values and numbers. Its purpose is to demonstrate how these values inform the design and logic of the BRF+ decision tables.

In addition, the table figures highlight the data that needs to be extracted from ECC systems, even though it will not be migrated into the target S/4HANA target .

System	Application	Scope	Source Approx No. of NAST Records	Target System	Target Approx No. of Records
PF2	V1		53997 records (raw count)	S4/Hana	
PF2	V3		134195 records (raw count)		
WP2	V1		36012 records (raw count)		
WP2	V3		42777 records (raw count)

## Data Cleansing

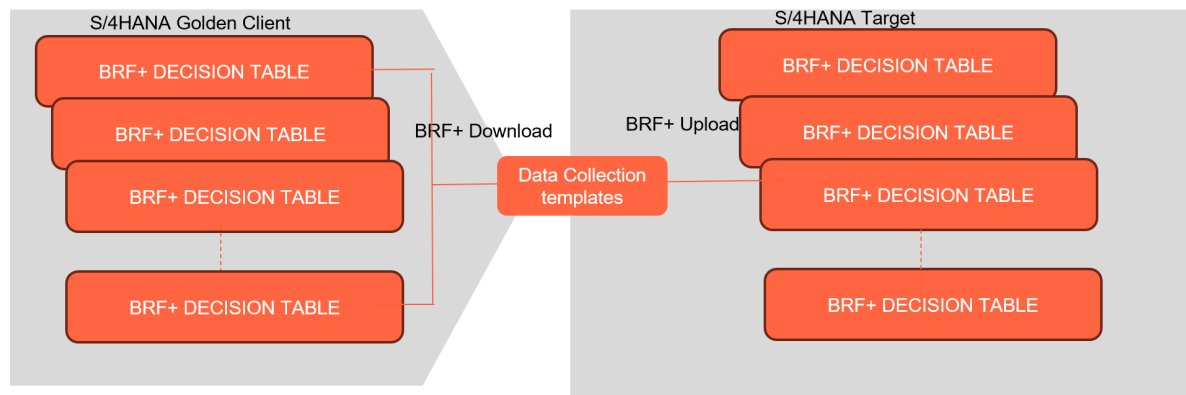

N/A

ID	Criticality	Error Message/Report Description	Rule	Output	Source System

## Conversion Process

The high-level process is represented by the diagram below:

### OUTPUT DETERMINATION – SALES AND INVOICE

## Data Privacy and Sensitivity

All data extracted must be anonymized and handled according to data protection policies.

- Copy 1:1 (keep Legacy)

## Extraction

Data will be extracted from ECC using SQL-based queries executed directly on the source database.

The extraction process is required to join those **B\*** condition tables—which contain a link to a business partner (KUNNR, KUNAG, KUNRE, KUNRG) or contain a large number of entries for a single output type—to the **NACH** table. This approach enables identification of the output medium and the output language and ensures that all relevant configuration records are captured.

The extracted data will **not** be migrated directly; instead, it will be used to:

- Update the business partner attributes that determine the appropriate outputs and channels.
- Populate the data collection files based on the BRF+ decision table setup.

Relevancy criteria will be applied to include only active, valid, and in scope records.

There will therefore be 2 different sets of Data collection Reports (RT)

- An initial set based on the legacy BXXX tables that will include all relevant information to facilitate the subsequent uploads. It will be referred to "RT\_OUTPUT\_CONDITIONS"
  - The RT\_OUTPUT\_CONDITIONS can be used in [CNV-3003 Business Partners - Customer \(Sales and Service\) - FLCU0](#) to set up default outputs channels. **(TBC)**
- A subsequent set of OPD DT tables, referred to as DT\_OPD\_DECISION\_TABLES

## Source Tables to be extracted:

Following Bxxx tables relate to output conditions linked to business partners as well as tables with multiple entries. The whole table needs to be extracted:

# Selection Screen

Selection Ref Screen	Parameter Name	Selection Type	Requirement	Value to be entered/set
Not applicable				

**Report (RT):**

**RT\_OUTPUT\_CONDITIONS**

The legacy output conditions from the B table will be combined with their corresponding medium / partner and language from table NACH in a report Table called RT\_OUPUT\_CONDITIONS. An additional column will be added to cater for following exceptions:

- a table / table entry without a Sales organisation
- a table / table entry without a customer
- A duplicate (or more) entry for a customer number (if possible)

As we are dealing with multiple tables with different number of fields, the customer number can be in different positions, and have a different field name:

The customer in the BXXX table can be

- KUNNR
- KNDNR
- KUNAG
- KUNRE
- KUNRG
- KUNWE

The customer number field will be referred to as CUSTNO and depending on the B table will be mapped as follows: (eg. B\_TABLE-CUSTNO = B\_TABLE-KNDNR if table = B001, B006 etc..)

	PF2									WP2						
KNDNR	B001	B006	B866	B867	B876	B891	B938	B989		B001						
KUNNR	B918									B934						
KUNRE	B919	B921	B927	B932	B940	B974				B505	B507	B551	B910	B923	B924	B957
KUNRG	B937	B966	B973	B998												
KUNAG										B572	B889					
KUNWE										B953	B962	B964				

## Data Transformation:

**RT\_OUTPUT\_CONDITIONS**

The target audience for the Output Conditions Report is:

- the L2C functional team responsible for uploading the various OPD decision tables. These tables will be reviewed by the business.
- the L2C data team as the L2C functional team may need to update the Business Partners sales view. (TBC)
  - Each BP's default Medium will be held in Customer Group 4 (sales) and 5 (billing) rather than being an entry in the Decision table (TBC)
  - The extraction will allow the following:
    - a table entry that leads to multiple output Mediums in NACH for the same partner
    - a table entry that leads to multiple output Mediums in NACH and partner depending on the condition type
  - New rules need to be agreed by the business and added to manage multiple table entries

Field Name	Field Description	Source	Rule	Target Table	Target Field	Transformation Logic
<b>TRANSFORMATION LOGIC:</b>						
There are 3 types of B tables						

- B\* tables without Sales Org
- B\* tables with Sales Org: (they will only be included if they belong to a relevant sales org)
  - B\* tables without Customer number (with many entries)
  - B\* table with Customer number

EXCEPTION = "MISSING ORG" - entry added to report

EXCEPTION = "NO CUSTOMER" - entry added to report

B\* Tables and NACH table are linked via field KNUMH. The purpose of the transformation is

- to obtain the NACH table entry or entries that contains the customer number. The customer number information is contained in NACH-VAKEY and can be the last field (RIGHT,10) or the 2nd field (MID, 4,10) for B919,B940,B940 ,B924.
- to obtain NACH entries for the relevant sales organisations if customer no is not available.

The NACH table entry will also contain the output partner (NACH-PARVW) and medium (NACH-NACHA)

It is possible to find multiple entries for a given customer, all the entries will be added to the **RT\_OUTPUT\_CONDITIONS** and a rule defined by the business will select the relevant one.

As the material number is not available, the sales org transformation should assign all relevant target sales orgs and add them.

B\* tables where there is no Sales organisation:

IF TABLE-NAME IN B891,B918,B919,B921,B927,B932,B937,B938 THEN

- EXCEPTION = "MISSING SORG"

ELSE

(exclude entries from not relevant Sales Organisation or Customer)

SELECT from WP2-BXXX where VKORG is in scope and KUNNR is in scope

SELECT from PF2-BXXX where VKORG is in scope and KUNNR is in scope

IF TABLE-NAME IN B005 , B995

- RT\_OUTPUT-VKORG = LEFT (NACH-VAKEY,4)
- EXCEPTION = "NO CUSTOMER"

IF TABLE-NAME IN B891,B918,B919,B921,B927,B932,B937,B938 THEN

READ NACH (using KNUMH number) where

NACH-KVEWE = 'B'

NACH-KAPPL = B\_TABLE-KAPPL

NACH-KSCHL = B\_TABLE-KSCHL

NACH-KNUMH = B\_TABLE\_KNUMH

NACH-KOTABNR = B\_TABLE-NAME

RIGHT(NACH-VAKEY,10) = B\_TABLE-CUSTNO IF TABLE-NAME <> B919 OR B940 OR B940 OR B924

ELSE (second field) MID (NACH-VAKEY,4,10) = B\_TABLE-CUSTNO

RT\_OUTPUT-CUSTNO = B-TABLE-CUSTNO

RT\_OUTPUT-PARVW = NACH-PARVW

RT\_OUTPUT-CHANNEL = NACH-NACHA

RT-OUTPUT-LANGUAGE = NACH-SPRAS

ADD ENTRY TO TABLE

## **RT OPD DECISION TABLES**

The L2C functional team is responsible for uploading the information in the OPD decision tables. Some tables are mainly replacing the legacy condition configuration, and will be populated with predefined values first for business review and update

BRF+ provides a built-in feature to **download and upload decision tables** as Excel files.

### **Steps:**

1. Go to BRF+ application in transaction **BRF+**
2. Open the **Decision Table** object.
3. From the **Table Maintenance** screen:
  - Click on **"Download to Excel"** system exports the current content and structure.
  - Fill in or update the Excel file offline.
  - Use **"Upload from Excel"** to import back.

### **Note:**

- **Each table must be handled individually.**
- **The creation of Data collection template must be aligned with BRF+ configurations .** For now, the following Templates are based on interim configurations (from S/4HANA sandbox). This will be replaced once the configuration is ready. The same applies to the contents of the DTs, they are here as examples of how the entries look like and will be replaced by real objects .

1. DT\_OUTPUT\_TYPE
2. DT\_RECEIVER
3. DT\_OUTPUT\_CHANNEL
4. DT\_EMAIL\_SETTING
5. DT\_EMAIL\_RECEIVER
6. DT\_OUTPUT\_RELEVANCE
7. DT\_FORM\_TEMPLATE

# Transformation

There will be no transformation on the legacy data. The data will be used to help design / complete the new decision tables in S/4 Hana.

## Transformation Run Sheet

Item #	Step Description	Team Responsible
	Finalized mapping document approved by Functional and Business teams.	
	Completion of source data extraction and cleansing.	
	Availability of default values for S/4 mandatory fields.	

### Legacy condition tables setup:

Please note that there is no direct mapping between the output condition types and the BRF+ output types. Not all Communication medium will be used in OPD. The tables below are used as guidelines as how the outputs will be managed in S/4.

#### Legacy Communication Medium to OPD Channel:

Application	MEDIUM	CHANNEL
V1/V3	ALE	

V1/V3	EDI	EDI
V1/V3	EXTERNAL SEND	IDOC / PRINT / EMAIL
V1/V3	PRINT	PRINT
V1/V3	MAIL	MAIL
V1/V3	SPECIAL FUNCTION	IDOC / PRINT / EMAIL

The table below contains the list of legacy output conditions that were triggered between 1st and 15th Nov 2025. Please also note that conditions no longer associated to V1 have been excluded. .

System	Applicati on	Output Type	Condition type Name	BRF+ Output Type	Print output 1	Fax 2	External Send 5	E DI 6	Simple Mail 7	Special function 8	Distribution (ALE) A

List of Custom Target Reports for this object is maintained here: [Conversion Specification - Custom Reports Register](#).

## Transformation Mapping

Mapping Table Name	Mapping Table Description
Not Applicable	

## Transformation Dependencies

List the steps that need to occur before transformation can commence

Item #	Step Description	Team Responsible
1	Decision Tables are complete	Functional Team (L2C) + Data Team (L2C)
2	OPD configuration is complete	Functional Team (L2C) + Data Team (L2C)
3	Org structure configuration is complete	Functional Team (L2C) + Data Team (L2C)
4	Dependent Master Data records for Customer and Material are loaded	Functional Team (L2C) + Data Team (L2C)

## PreLoad Validation

### Project Team

### Completeness

Task	Action
Configuration	Ensure necessary configurations are in place in target system
Check Values	Validate the pre-load data confirming the values are aligned with BRF+ configuration
Validate template structure and required field population	Ensure mandatory fields as per the definition table are available

## Accuracy

Task	Action
Perform format validation (if relevant)	Standardize format to match SAP accepted input (e.g., YYYYMMDD for dates)
Conduct dry runs using BRF+ Simulations	Analyze load results and correct format or conversion errors

## Business

### Completeness

Task	Action
Completeness	Review and confirm if the extraction contain all the relevant DT and DT entries

### Accuracy

Task	Action
Completeness	Review and confirm if the extraction contain all the accurate DT and DT entries

## Load

The load process includes:

1. The process will involve downloading the DCT Excel Decision Tables and then uploading the tables into the target system using the standard SAP BRF+ upload functionality .The generated excel files will be used as load files
2. Once the data is loaded to the target system, it will be extracted and prepared for Post Load Data Validation

BRF+ provides a built-in feature to **download and upload decision tables** as Excel files.

### Steps:

1. Go to BRF+ application in transaction **BRF+**
2. Open the **Decision Table** object.
3. From the **Table Maintenance** screen:
  - Click on "**Download to Excel**" system exports the current content and structure.
  - Fill in or update the Excel file offline.
  - Use "**Upload from Excel**" to import back.

## Load Run Sheet

Each Item represent a Decision table downloaded from Golden Client

There will be Decision tables for sales and Billing.

Item #	Step Description	Team Responsible

DT_OUTPUT_TYPE		
DT_OUTPUT_CHANNEL		
DT_RECEIVER		
DT_EMAIL_SETTING		
DT_EMAIL_RECEIVER		
DT_OUTPUT_RELEVANCE		

## Load Phase and Dependencies

### Configuration

Item #	Configuration Item
BRF+ configurations	Ensure configurations are complete for the target system and mapping tables are updated accordingly
Organization Data	Ensure configurations for all the organization units are imported into the target system

### Conversion Objects

Object #	Preceding Object Conversion Approach
Material Master	Material Master Basic and Sales View
Business Partner	Business Partner Basic and Sales View

### Error Handling

Error Type	Error Description	Action Taken
Authorization Errors	Lack of access to execute load in target client/system	Raised access request; obtained necessary authorizations
Obsolete Master Data	Customer or material master data no longer exists in target system	Replaced or removed based on business input
Technical Load Failure	File not processed due to syntax/format error or system issue	Reviewed logs; regenerated file; re-executed load after resolving issue
Missing Dependencies	Dependent records (Order types, business partners, Email Addresses) not available	Reviewed config dependencies; coordinated with config team for correction

## PostLoad Validation

### Project Team

### Completeness

--	--

Task	Action
Download DT in target as described before	

### Accuracy

Task	Action

### Business

### Completeness

Task	Action

### Accuracy

Task	Action

## Key Assumptions

- Master Data Standard is up to date as on the date of documenting this conversion approach and data load.
- is in scope based on data design and any exception requested by business.
