

Fatigue data uploads

As part of our ongoing efforts to consolidate fatigue-related data, we have observed that SN data is currently stored in multiple locations.

To streamline this process and support the Material Center, we have created an Excel sheet and a shared folder for centralized data collection.

This includes all types of loadings and sample types (E.g.: Coupons, Gears, L samples,.....).

Action Required:

1. Please enter your information directly into the provided Excel table here. "Fatigue experimental data information"
2. Upload your SN data as excel sheet or .csv to the shared folder here.

Once you have uploaded your files, please notify prashanth.santharam@syensqo.com, who is currently responsible for consolidating fatigue data. His responsibilities include gathering, organizing, extracting metadata, and uploading the information to the Material Center.
