

ERP-640 Outbound Delivery Distribution (LE to EWM)

Status	Approved
Owner	AROKIARAJAN-ext, Francis
Stakeholders	HOWES, Jamie PALMER, Francine VENKAT-ext, Rama
Jira Request ID	ERP-537 Outbound Delivery Distribution (LE to EWM)
Jira Development ID	ERP-640 Outbound Delivery Distribution (LE to EWM)

High- Level Specification

Parameter	Value
Application System	SyWay S/4HANA
Business Process Reference	06.10.03.01. Manage Outbound Deliveries

Functional Overview

Outbound Delivery creation will be happened through Manual/background job, which will be run periodically. At the time of outbound delivery creation, system will try to allocate the batch based on the predefined rules and distribution from S/4HANA to EWM is triggered when saving the delivery.

Enhancement to Check Distribute Outbound Delivery:

Once all the line item have been allocated batches in outbound delivery then allow to distribute the outbound delivery to EWM for those only relevant for deliveries with storage locations active for EWM.

Note: the distribution is for the whole outbound delivery, not for the individual delivery item.

Scope and Objectives

Objective

To Implement an automated check during Outbound Delivery processing that inspects all line items. When saving an outbound delivery, if any item is for a batchmanaged material and the batch field is empty, the system must prevent distribution to EWM (no ODO created; distribution status remains Relevant/Planned).

- **In scope:** Outbound deliveries relevant to **Embedded EWM**
- **Out of scope:** Other delivery (Inbound deliveries, IM outbound deliveries, return deliveries..etc).

Process Flow Diagram

Step	Description	Comment
1	Create Outbound Delivery Manually	An Automated check during Outbound Delivery processing that inspects all line items. if any item is for a batchmanaged material and the batch field is empty for EWM Relevant SLOC, the system must prevent distribution to EWM.
2	Create Outbound Delivery Via Batch Job	An Automated check during Outbound Delivery processing that inspects all line items. if any item is for a batchmanaged material and the batch field is empty for EWM Relevant SLOC, the system must prevent distribution to EWM.
3	Create Subcontracting Outbound Delivery	An Automated check during Outbound Delivery processing that inspects all line items. if any item is for a batchmanaged material and the batch field is empty for EWM Relevant SLOC, the system must prevent distribution to EWM.

Assumptions & Dependencies

- Materials that participate are **batchmanaged** (MARA-XCHPF = 'X').
- Plants/storage locations are **EWMrelevant** (/SCWM/TMAPSTLOC - mapped to EWM based on Plant/SLOC standard integration active).

Security, Integrity and Controls

- BADI implementation class must be transportable and accessible in the Private Cloud tenant.
- No special enduser auth needed beyond standard LE/EWM authorizations.

Design Rationale

Functional Requirements

When saving an outbound delivery (Document Category 'J'), if any line items (include Batch Spilt line also) Storage Location is relevant EWM and a batchmanaged material and the batch field is empty, the system must prevent distribution to EWM (no ODO created; distribution status remains Relevant/Planned).

Note: For batch split, the **main item's batch is expected to be blank**; validate **each batch split subitem** instead.

- Enhancement Spot:** ES_LE_SHP_EXTEND
- BADI:** LE_SHP_CHECK_DISTRIBUTION
- Interface:** IF_LE_SHP_CHECK_DISTRIBUTION
- Method:** CHECK_DISTRIBUTION (parameters include DELIVERY_DOCUMENT_IN, DELIVERY_DOCUMENT_ITEMS_IN, MESSAGES, DISTRIBUTION_NOT_ALLOWED_OUT).

Data Source Considerations

Table	Field Name	Comments/Calculation/Field Manipulation
LIKP	VBTYP	delivery Header (Document Category)
LIPS	MATNR	delivery items (Material)
LIPS	CHARG	delivery items (Batch)
LIPS	WERKS	delivery items (Plant)
LIPS	LGORT	delivery items (Storage Location)
MARA	XCHPF	Material Master (Batch Management Indicator)

Data Validation Considerations

Table	Field Name	Comments/Calculation/Field Manipulation
LIKP	VBTYP	If LIKP-VBTYP = 'J' then only apply the following conditions
LIPS	MATNR	To check Material Batch Management Indicator (MARA-XCHPF) as 'X' then apply the following conditions
LIPS	WERKS & LGORT	If LIPS-WERKS & LIPS-LGORT is EWM Relevant then only apply the following conditions

Processing Logic

To apply the following Logic at METHOD (CHECK_DISTRIBUTION) in interface (IF_LE_SHP_CHECK_DISTRIBUTION)

1) To check the Scope to Outbound Delivery only based on Document Category (J) of Delivery. If LIKP-VBTYP <> 'J' then RETURN. otherwise continue

2) Loop all items of delivery to check EWM Relevant and batch-managed material based on Plant & Storage Location combination and Material master Batch Management Indicator (MARA-XCHPF)

If batch-managed material (MARA-XCHPF) = "X" then check Batch not allocated in Delivery item.

If it is not allocated then update Block distribution as TRUE otherwise FALSE

3) If there is Block distribution as TRUE then

Update DISTRIBUTION_NOT_ALLOWED_OUT = TRUE

MESSAGE = "Batch missing on at least one batch-managed item; distribution to EWM blocked" with MSGID='VL' MSGNO = '000' MSGTY = 'E'.

Volumetrics

Not Applicable

Performance Considerations

- Use **in-memory item tables** where possible.
- Single SELECT for MARA-XCHPF with FOR ALL ENTRIES.
- Early exit as soon as one batch is found.

Error Handling

- **Info message** : "Batch missing on at least one batch-managed item; distribution to EWM blocked"
- **No hard error**: Do not block save unless explicitly required.
- **Logging**: Add to application log (BAL) with object LE and sub object DELIVERY.

Testing

How to Test

Create **Outbound Deliveries** (manual or via **background jobs**) with **multiple line items**, driven by **EWM-relevant storage locations**, supporting both **Batch-Managed** and **Non-Batch-Managed** materials.

Note: EWM distribution is applicable **only** when the **Storage Location** is **EWM-relevant**.

Test Conditions and Expected Results

ID	Condition	Expected Result
TS1	Block distribution when one item missing batch: Create a Outbound delivery (LF) with two items; Item 10 batchmanaged, CHARG empty; Item 20 batchmanaged, CHARG filled and Save Outbound Delivery.	Distribution to EWM is prevented , error message shown; EWM ODO not created.

TS2	Allow distribution when all batches allocated: Create a Outbound delivery (LF) with two items; where all batchmanaged items have CHARG filled and SAVE Outbound Delivery.	Distribution proceeds; ODO appears in EWM monitor /SCWM/MON or /SCWM/PRDO.
TS3	Redistribution after correction: Change Outbound Delivery for outbound delivery previously distributed Erroneously (From TS1) and allocate Batch & SAVE Outbound Delivery.	Distribution proceeds; ODO appears in EWM monitor /SCWM/MON or /SCWM/PRDO.
TS4	Nonbatch material: Create a Outbound delivery (LF) with two items; Where all items nonbatch materials only and SAVE Outbound Delivery.	Distribution proceeds; ODO appears in EWM monitor /SCWM/MON or /SCWM/PRDO.
