Syensqo (formerly part of Solvay) is organized into several Global Business Units (GBUs) focused on specialty materials and chemicals.

The main Global Business Units are:

1. Materials Segment

This segment focuses on high-performance polymers and composites, primarily targeting sustainable mobility, aerospace, and electronics.

- **Specialty Polymers:** Develops a broad portfolio of high-performance thermoplastic resins, fluoroelastomers, and fluorinated fluids (e.g., Solef® PVDF, Tecnoflon® FKM) for demanding environments, including batteries, healthcare, and automotive applications.
- **Composite Materials:** A top-tier supplier of advanced composite and adhesive materials, specialized in lightweighting solutions for the aerospace and defense industries.

2. Performance & Care Segment

This segment (previously named Consumer & Resources) focuses on sustainable, bio-based, and performance-enhancing chemistry.

- **Novecare:** A leader in mild surfactants, cationic guar, and polymers for home care, beauty care, coatings, and agricultural applications.
- **Technology Solutions:** A global leader in phosphorus chemistry and specialty mining reagents, providing solutions for mineral processing and metal extraction.

Other Units & Strategic Areas

- **Aroma Performance:** A major producer of synthetic and natural vanillin and a leader in the hydroquinone market.
- **Syensqo Ventures:** The company's corporate venture capital fund, which invests in startups focusing on sustainable advanced materials, clean energy, and biotechnology.
- **Note on Oil & Gas:** In January 2026, Syensqo completed the divestment of its Oil & Gas business unit.

These GBUs are supported by a global network of research centers and a newly formed Global Capability Center (GCC) in Pune, India
