

ERP-1540 System Interface - GBUSegment.tab interface to Maestro

Status	Approved
Owner	BROWN-ext, Kevin
Stakeholders	NARAHARI-ext, Bhargavi GARG-ext, Praful
Jira Request ID	<div style="border: 1px solid orange; padding: 5px;">  ERP-1212 - Jira project doesn't exist or you don't have permission to view it. </div>
Jira Development ID	<div style="border: 1px solid orange; padding: 5px;">  ERP-1540 - Jira project doesn't exist or you don't have permission to view it. </div>

High- Level Specification

Implementing System	Kinaxis Maestro
Invoked by/Invokes	<div style="border: 1px solid orange; padding: 5px;">  ERP-1527 - Jira project doesn't exist or you don't have permission to view it. </div>
Business Process Reference	04.04.06.01. Data provisioning ERP to Maestro

Functional Overview

This table stores information regarding GBU segment in Maestro.

Scope and Objective

The scope of this interface is between Global Integration Suite and Maestro. This document includes details of the GBUSegment.tab object.

The objective is to populate the GBUsegment and it's referenced tables based on the file provided by Global Integration Suite.

Process Flow Diagram

</display/ER/System+Interface++Reference+Specification+for+Maestro>

Step	Description
------	-------------

1	Global Integration Suite transfers transformed Composites / Rest of World data from S/4, and performs some formatting, and sends the data to Maestro.
3	Transferred files will be sent to Maestro's Client SFTP server. This sits outside of the Maestro firewall and is accessible by client using a user id/ password. Files are transferred from this component to the Planning Server SFTP by a Kinaxis automatic process once the trigger file has been placed (see below)
4	Files are moved to this SFTP server automatically, where they await loading into Maestro.
5	Maestro uses the configured DSM (Data Sources and Mapping) setup to load the data into the GBUsegment table, with the load initiated either manually or through a scheduled system task.
6	The Data Tables which store information in Maestro

Assumptions

See [OnHand.tab System Interface](#) document for assumptions.

Dependencies

See [OnHand.tab System Interface](#) document for dependencies.

Security, Integrity and Controls

See [Application Architecture Kinaxis Maestro](#) for security requirements for SFTP/REST based authentication and security.

Configuration Requirements

The Data Sources and Mapping for this interface should be configured once, according to the structure in the Data Structure section below.

The Data Model needs to be configured with the Syway-specific fields shown in the Data Model Custom Fields section below.

Special Requirements

None

Design Rationale

The base of this design has been taken from the existing Maestro implementation, as designed during the Advanced Planning System (APS) Project.

A fit-gap analysis was undertaken within Syway, and changes were identified which have been incorporated into the Syway spec as shown.

API Use

The data object provided by either Integration Suite will be **consumed** by Maestro.

For more information see the [Data Integration Document](#).

Data Structure

The following Maestro fields will be populated by the file provided by Integration Suite:

Column Number	Field Name	Technical Field Name	Data Type	Key	Field Type	Autocreate	Description
1	Id	Id	String	Y	ExtractField		A value that uniquely identifies the GBUsegment
2	Description	Description	String	N	ExtractField		GBUsegment Description

File Formats

See *File Formats - SFTP* section in the [Data Integration Document](#).

Data Model GBUSegment table settings:

Allow Data update to:			Currency	
Insert, Modify and Delete records	Insert and Modify records only	Allow automatic record creation	Determined by Maestro	Expression
Y	-	Y	Y	-

Data Model GBUSegment custom fields:

There are no additional custom fields in this table. See section [Data Structure](#) above.

Processing Logic

See *Processing Logic - SFTP* section in the [Data Integration Document](#).

Delta or Full Load Requirements

The preference is to do a full load.

For more information on the difference between Full and Delta loads, see the *Full Loads and Delta Loads - SFTP* section in the [Data Integration Document](#).

Interface Alert & Monitoring

See the *Interface Alert & Monitoring - SFTP* section in the [Data Integration Document](#),

Language Requirements

None

User Interface Requirements

Not required.

Sequencing

N/A

Volumetrics

Current APS Volume of GBUSegment records is 147. Because APS makes up approximately 60% of Syway projected records, an expected estimate for Syway is therefore 235.

This value is expected to grow by 1-2% per year.

Performance Consideration

N/A

Error Handling

See [Interface Alert & Monitoring](#) section.

Testing

How to Test

See [OnHand.tab System Interface](#) document for information on how to test.

Test Conditions and Expected Results

1	Data Load Successful	The Data in the data file matches the data in the Maestro table, and there are no errors.
2	Data File contains 0 records	The Data Update should fail with a status of Pending.
3	Data file contains duplicates	The GBUsegment.tab file must be checked further for data uniqueness with respect to the key fields, in case data is available in file but not in Maestro

Test Considerations/Dependencies

Dependent files should already be loaded into Maestro for these tests to complete. See [Sequencing](#) section above.
