STATUS

Introduction

This document details the technical flow for master data objects. The approach is different to transaction data documentation as a 'cookie-cutter' approach is taken meaning that the master data design is the same for most objects. Separate data flow documentation is **BY EXCEPTION** only, and documented in the latter sections of this document: i.e.

- Where a master data object follows the standard approach, it does NOT need to be defined individually.
- If an object does not need certain aspects of the core design, i.e., some aspect of the complete standard design (e.g. it has no texts or hierarchies or MD), it can still be considered a standard pattern.

The table in Appendix 1 is completed for master data objects following the standard design. This links the MD object to the source CDS views / datasources.

If a master data object does not follow a standard pattern, it will be documented under the exceptions heading. E.g. Business partner may need to have additional logic to include identifications types, such as Dun and Bradstreet number. This object will need its own documentation which will be added in subsequent versions.

Standard Patterns

In SyWay, there are three types of master data referred to as '[Tiers](#)'. These tiers will have slightly different approaches:

Tier 1: Master data is maintained centrally. The same master data will exist in every S/4 system. Build master data objects based on RoW source tables.

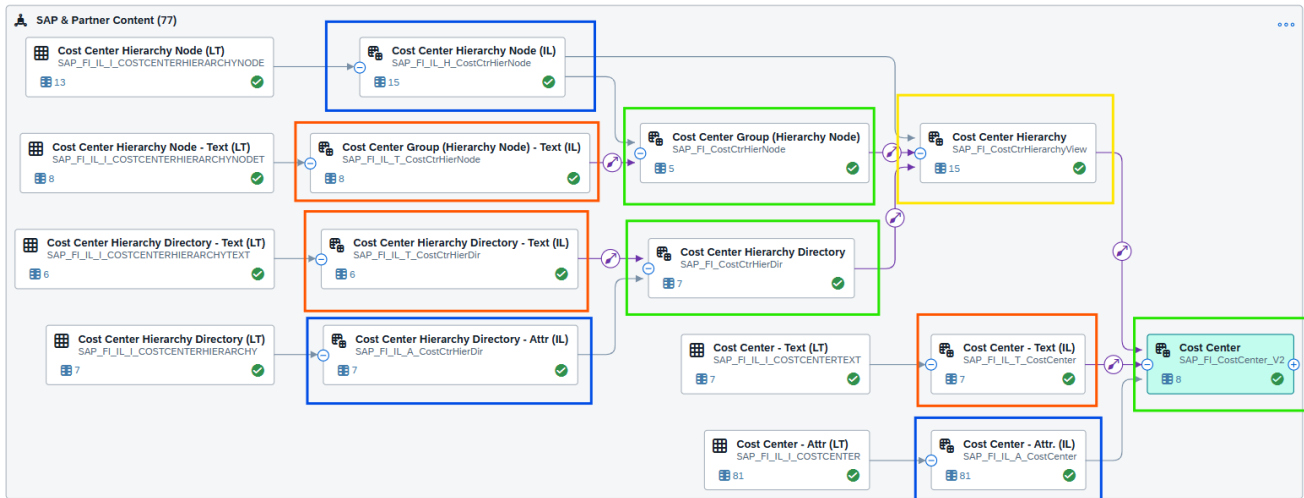

Tier 2 with number ranges: Master data is defined centrally and will exist in unique number ranges in each system but no single system contains all the data. The standard solution is to create data flows from each source system to a single table in the EDW space and build master data objects on these tables.

Tier 3 and Tier 2 without number ranges: Master data is maintained separately in each S/4 system and there is a risk of MD key clashes. Here the solution is to create data flows from each source system to a single table in the EDW space and to add source system to the key of this table. Master data objects are built on these tables with a compound key in the master data object definition.

Tier 1 Master Data

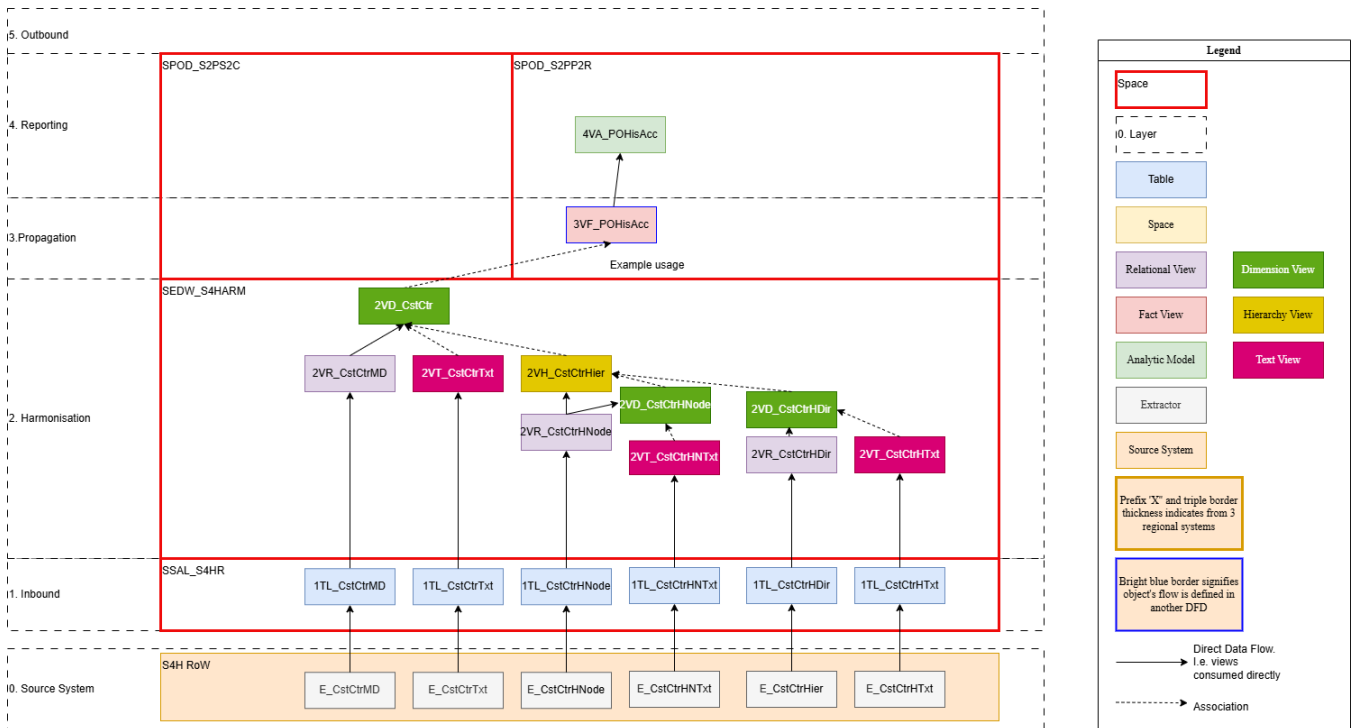

It is expected that most master data objects used in Datasphere will fall into the Tier1 category:

The data flow diagram is based upon the SAP content for cost centre:

Green = Dimension, Blue = relational, Red = Text, Yellow = Hierarchy with directory. The data flow diagram maps this basic formation onto the SyWay layers and spaces and adopts the SyWay naming.

N.B. Names in boxes are codes which supports the easy creation of the enterprise relationship model. Actual names are then mapped to the codes later in the boxes underneath.

MD to extractor link maintained in the table in Appendix 1. The Cost Centre example names below will be replaced with the equivalent for the master data object in question according to the extractor CDS name.

The tables below are representative and do NOT need to be updated unless this diagram is copied to portray an exception to the main patterns

Code	Tech Name
1TL_CstCtrMD	1TL_S4HR_I_COSTCENTER
1TL_CstCtrTxt	1TL_S4HR_I_COSTCENTERTEXT
1TL_CstCtrHNode	1TL_S4HR_I_COSTCENTERHIERARCHYNODE
1TL_CstCtrHNTxt	1TL_S4HR_I_COSTCENTERHIERARCHYNODET
1TL_CstCtrHDir	1TL_S4HR_I_COSTCENTERHIERARCHY
1TL_CstCtrHDTxt	1TL_S4HR_I_COSTCENTERHIERARCHYTEXT

Code	Tech Name
2VR_CstCtrMD	2VR_S4HARM_I_CostCenter
2VT_CstCtrTxt	2VT_S4HARM_CostCenterText
2VR_CstCtrHNode	2VR_S4HARM_I_CostCenterHierarchyNode
2VT_CstCtrHNTxt	2VT_S4HARM_I_CostCenterHierarchyNodeT
2VR_CstCtrHDir	2VR_S4HARM_I_CostCenterHierarchy
2VT_CstCtrHDTxt	2VT_S4HARM_CostCenterHierarchyText

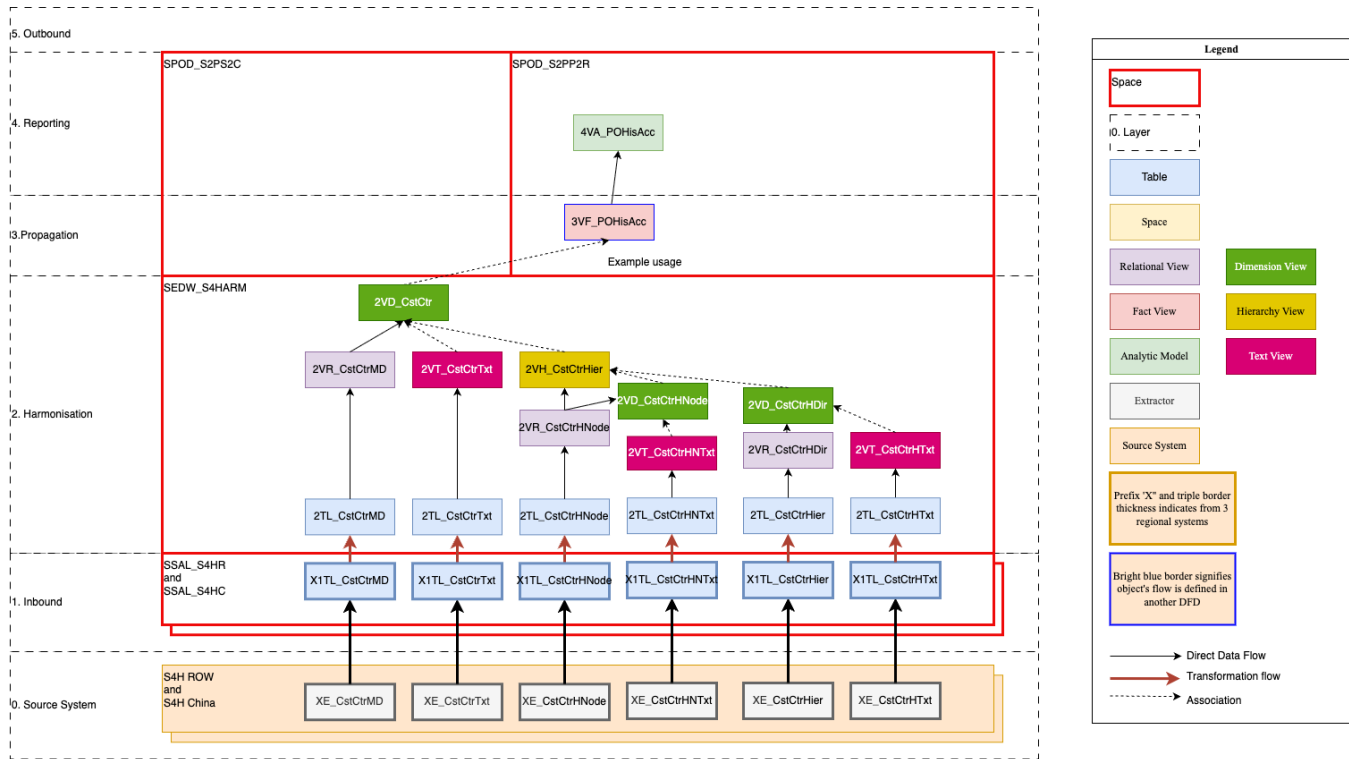

Code	Tech Name
2VH_CstCtrHier	2VH_S4HARM_CostCenterHierarchy
2VD_CstCtrHNode	2VD_S4HARM_CostCenterHierarchyNode
2VD_CstCtrHDir	2VD_S4HARM_CostCenterHierarchy
2VD_CstCtr	2VD_S4HARM_CostCenter
3VF_POHisAcc	Example Fact View
4VA_POHisAcc	Example Analytic Model

Key points to note:

The MD object is created in the SEDW_ space. This approach allows an easy pivot to the Tier 2 pattern if it is found that this is necessary.

Tier 2 Master Data - Standard Pattern

! N.B. in the following diagram, cost centre has been used as the representative object for the purposes of showing the pattern only. Cost centre itself is a Tier 1 object and should be built as such.

MD to extractor link maintained in the table in Appendix 1. The Cost Centre example names below will be replaced with the equivalent for the master data object in question according to the extractor CDS name.

The tables below are representative and do NOT need to be updated unless this diagram is copied to portray an exception to the main patterns

Code	Tech Name
X1TL_CstCstMD	1TL_S4Hx_I_COSTCENTER
X1TL_CstCstTxl	1TL_S4Hx_I_COSTCENTERTEXT
X1TL_CstCstHNode	1TL_S4Hx_I_COSTCENTERHIERARCHYNODE
X1TL_CstCstHNTxl	1TL_S4Hx_I_COSTCENTERHIERARCHYNODET
X1TL_CstCstHDir	1TL_S4Hx_I_COSTCENTERHIERARCHY
X1TL_CstCstHDTxl	1TL_S4Hx_I_COSTCENTERHIERARCHYTEXT

Code	Tech Name
2TL_CstCirMD	2TL_S4HARM_I_CostCenter
2TL_CstCirTxt	2TL_S4HARM_I_CostCenterText
2TL_CstCirHNode	2TL_S4HARM_I_CostCenterHierarchyNode
2TL_CstCirHNTxt	2TL_S4HARM_I_CostCenterHierarchyNodeT
2TL_CstCirHDir	2TL_S4HARM_I_CostCenterHierarchy
2TL_CstCirHDtxt	2TL_S4HARM_I_CostCenterHierarchyText

Code	Tech Name
2VR_CstCtrMD	2VR_S4HARM_I_CostCenter
2VT_CstCtrTxt	2VT_S4HARM_CostCenterText
2VR_CstCtrHNode	2VR_S4HARM_I_CostCenterHierarchyNode
2VT_CstCtrHNTxt	2VT_S4HARM_CostCenterHierarchyNodeT
2VR_CstCtrHDir	2VR_S4HARM_I_CostCenterHierarchy
2VT_CstCtrHDTxt	2VT_S4HARM_CostCenterHierarchyText

Code	Tech Name
2VH_CstCtrHier	2VH_S4HARM_CostCenterHierarchy
2VD_CstCtrHNode	2VD_S4HARM_CostCenterHierarchyNode
2VD_CstCtrHDir	2VD_S4HARM_CostCenterHierarchy
2VD_CstCtr	2VD_S4HARM_CostCenter
3VF_POHIsAcc	Example Fact View
4VA_POHIsAcc	Example Analytic Model

Key point to note: Data from the two S/4HANA systems is brought together into a single 2TL table via data flows for consumption by the 2VR views. The 2TL table does NOT need to have source system in the key.

Tier 3 Master Data - Standard Pattern

This is the same as the Tier 2 pattern with the exception that the source system field is added to the key of the 2TL tables to prevent master data 'collisions'. (I.e. where the same MD key exists with different master data values in the different systems).

Exceptions

DFD and logic to be created with details as to why there is the exception.

Appendix 1: Standard Pattern Extraction Information

The following table contains the mapping for master data dimensions to their source CDS views to support the build of the standard pattern as described above. The working version of this table is held in sheet 'Foundation Build' [here](#).

Guide to table columns:

Dimension Name: This is the text for dimension. Texts will need to be maintained in multiple languages. At time of writing (04/03/2026), this will happen as an activity later in the project.

Data Extraction Type: This describes the type of master data that the is being loaded to the dimension.

CDS View: The CDS view to be used to get the data.

Text: The text for the CDS view, as this table is to be used for build only, and the CDS view is a technical object not seen by users, the tables is in English only.

Release Status: This describes the [stability contract](#) for the CDS view. Used views must be released by SAP.

Delta Enabled: Where tables are delta enabled, extraction will make use of this. As standard, SyWay will take full loads from tables that are not delta enabled, however, if these views are known to be large, or a performance risk an delta enabled bespoke version may be considered.

Dimension name	Data Extraction Type	CDS View	Text	Released	Delta enabled
